Cooperative Event-Based Control of Mobile Agents Michael Schwung,2022-06-01 This thesis proposes a method that plans trajectories for autonomous agents to enable them to fulfil different tasks while ensuring the collision free movement The agents are locally controlled and connected over an unreliable communication network that may induce packet losses and transmission delays Further sensors e g for a distance measurement are not used and communication should only be invoked if it is necessary to avoid a collision The basic problem occurs for two agents The first agent can change its trajectory at any time without regard to the second agent which has to ensure the collision avoidance To this aim it adapts its trajectory based only on local data and communicated information about the current and future movement of the first agent A control unit for the second agent is introduced that has to execute four tasks to ensure the control aims 1 Estimation of the current network properties 2 Prediction of the movement of the stand on agent 3 Invocation of communication whenever the local data becomes too uncertain 4 Planning of collision avoiding trajectories The main result of the thesis is a novel control method for mobile agents that solves the four tasks leading to a proven collision avoidance The method consists of a delay estimator a prediction unit an event generator and a trajectory planning unit The method can be used for different types of agents e g UAVs or cars with only slight modifications The proposed method is tested and evaluated through simulations and experiments with both two quadrotors and two nonholonomic robots *Nautical Almanac and Astronomical Ephemeris* ,1875 **Elements of Surveying** Raymond Earl Davis,Francis Seeley Foote,William Horace Rayner,1930 *Computer Vision & Laser Vibrometry, Volume 6* Javad Baqersad,Dario Di Maio,2025-08-08 Computer Vision Laser Vibrometry Volume 6 Proceedings of the 41st IMAC A Conference and Exposition on Structural Dynamics 2023 the sixth volume of ten from the Conference brings together contributions to this important area of research and engineering The collection presents early findings and case studies on fundamental and applied aspects of Computer Vision Laser Vibrometry and Structural Health Monitoring including papers on Novel Techniques Optical Methods Scanning LDV Methods Photogrammetry DIC Structural Health Monitoring **The Nautical Almanac and Astronomical Ephemeris for the Year ...** ,1882 Astronomy Simon Newcomb,Edward Singleton Holden,1883 T.P.'s Weekly Thomas Power O'Connor,Holbrook Jackson,1905

   Terrain Aided Localisation of Autonomous Vehicles in Unstructured Environments Rajmohan Madhavan,2003-03-08 This thesis is concerned with the theoretical and practical development of reliable and robust localisation algorithms for autonomous land vehicles operating at high speeds in unstructured expansive and harsh environments Localisation is the ability of a vehicle to determine its position and orientation within an operating environment The need for such a localisation system is motivated by the requirement of developing autonomous vehicles in applications such as mining agriculture and cargo handling The main drivers in these applications are for safety efficiency and productivity The approach taken to the localisation problem in this thesis guarantees that the safety and reliability requirements imposed by such applications are achieved The approach also aims to minimise the engineering or modification of the environment such as adding artificial landmarks or other infrastructure This is a key driver in the practical implementation of a localisation algorithm In pursuit of these objectives this thesis makes the following principal contributions 1 The development of an Iterative Closest Point Extended Kalman Filter ICP EKF algorithm a map based iconic algorithm that utilises measurements from a scanning laser rangefinder to achieve localisation The ICP EKF algorithm entails the development of a map building algorithm The main attraction of the map based localisation algorithm is that it works directly on sensed data and thus does not require extraction and matching of features It also explicitly takes into account the uncertainty associated with measurements and has the ability to include measurements from a variety of different sensors 2 The development and implementation of an entropy based metric to evaluate the information content of measurements This metric facilitates the augmentation of landmarks to the ICP EKF algorithm thus guaranteeing reliable and robust localisation 3 The development and adaptation of a view invariant Curvature Scale Space CSS landmark extraction algorithm The algorithm is sufficiently robust to sensor noise and is capable of reliably detecting and extracting landmarks that are naturally present in the environment from laser rangefinder scans 4 The integration of the information metric and the CSS and ICP EKF algorithms to arrive at a unified localisation framework that uses measurements from both artificial and natural landmarks combined with dead reckoning sensors to deliver reliable vehicle position estimates The localisation framework developed is sufficiently generic to be used on a variety of other autonomous land vehicle systems This is demonstrated by its implementation using field data collected from three different trials on three different vehicles The first trial was carried out on a four wheel drive vehicle in an underground mine tunnel The second trial was conducted on a Load Haul Dump LHD truck in a test tunnel constructed to emulate an underground mine The estimates of the proposed localisation algorithms are compared to the ground truth provided by an artificial landmark based localisation algorithm that uses bearing measurements from a laser To demonstrate the feasibility and reliability of both the natural landmark extraction and localisation algorithms these are also implemented on a utility vehicle in an outdoor area within the University s campus The results demonstrate the robustness of the proposed

localisation algorithms in producing reliable and accurate position estimates for autonomous vehicles operating in a variety of unstructured domains   *Lectures and Essays by the Late William Kingdon Clifford, F.R.S.* William Kingdon Clifford,1886
