Topology For Computing:

   Topology for Computing Afra J. Zomorodian,2005-01-10 The emerging field of computational topology utilizes theory from topology and the power of computing to solve problems in diverse fields Recent applications include computer graphics computer aided design CAD and structural biology all of which involve understanding the intrinsic shape of some real or abstract space A primary goal of this book is to present basic concepts from topology and Morse theory to enable a non specialist to grasp and participate in current research in computational topology The author gives a self contained presentation of the mathematical concepts from a computer scientist s point of view combining point set topology algebraic topology group theory differential manifolds and Morse theory He also presents some recent advances in the area including topological persistence and hierarchical Morse complexes Throughout the focus is on computational challenges and on presenting algorithms and data structures when appropriate   *Computer Algebra in Scientific Computing* Vladimir P. Distributed Computing Through Combinatorial Topology Maurice Herlihy,Dmitry Kozlov,Sergio Rajsbaum,2013-11-30 Distributed Computing Through Combinatorial Topology describes techniques for analyzing distributed algorithms based on award winning combinatorial topology research The authors present a solid theoretical foundation relevant to many real systems reliant on parallelism with unpredictable delays such as multicore microprocessors wireless networks distributed systems and Internet protocols Today a new student or researcher must assemble a collection of scattered conference publications which are typically terse and commonly use different notations and terminologies This book provides a self contained explanation of the mathematics to readers with computer science backgrounds as well as explaining computer science concepts to readers with backgrounds in applied mathematics The first section presents mathematical notions and models including message passing and shared memory systems failures and timing models The next section presents core concepts in two chapters each first proving a simple result that lends itself to examples and pictures that will build up readers intuition then generalizing the concept to prove a more sophisticated result The overall result weaves together and develops the basic concepts of the field presenting them in a gradual and intuitively appealing way The book s final section discusses advanced topics typically found in a graduate level course for those who wish to explore further Named a 2013 Notable Computer Book for Computing Methodologies by Computing Reviews Gathers knowledge otherwise spread across research and conference papers using consistent notations and a standard approach to facilitate understanding Presents unique insights applicable to multiple computing fields including multicore microprocessors wireless networks distributed systems and Internet protocols Synthesizes and distills material into a simple unified presentation with examples illustrations and exercises **Informatics Practices for Class 12** Dr. Pranab Kumar Das Gupta & Ramprosad Mondal, A book on Computers **Mathematical Software -- ICMS 2014** Hoon Hong,Chee Yap,2014-08-01 This book constitutes the proceedings of the 4th International Conference on Mathematical Software ICMS 2014 held in Seoul South Korea in August 2014 The 108 papers included in this volume were carefully reviewed and selected from 150 submissions The papers are organized in topical sections named invited exploration group coding topology algebraic geometry surfaces reasoning special Groebner triangular parametric interfaces and general SAGA – Advances in ShApes, Geometry, and Algebra Tor Dokken,Georg Muntingh,2014-10-24 This book summarizes research carried out in workshops of the SAGA project an Initial Training Network exploring the interplay of Shapes Algebra Geometry and Algorithms Written by a combination of young and experienced researchers the book introduces new ideas in an established context Among the central topics are approximate and sparse implicitization and surface parametrization algebraic tools for geometric computing algebraic geometry for computer aided design applications and problems with industrial applications
