sustainability will differ across any given selection of projects the role of the project manager is always influential Therefore meaning that project managers and the project management profession should take more responsibility for creating a sustainable future To achieve this however it is widely understood that the specific expertise of project managers will need to evolve to enable practical implementation of the concepts involved with sustainability This existing research and literature includes thorough investigation into the obstacles which arise when the traditional systems and principles for construction project management are applied to the modern specifications called for in sustainable development and sustainable design projects Through advancing on these conclusions this new research thesis explores how the individual project manager and the project management profession can begin to bridge the gap between traditional project outcomes and the ever developing requirements for built sustainable design project outcomes within the New Zealand commercial building construction industry In doing so the author endeavours to understand how the integration of sustainable development with the quality sector of the Iron Triangle can be driven by the project management profession to influence the production and delivery of sustainable built environments in New Zealand Considerations will include the current market position within the New Zealand construction industry together with examination into why these two concepts are currently divergent and whether government legislation is helping or hindering a shift toward a more sustainable construction industry
