Zeta Functions In Geometry:

  Zeta Functions in Geometry Kurokawa N. (Nobushige),Toshikazu Sunada,1992 This book contains accounts of work presented during the research conference Zeta Functions in Geometry held at the Tokyo Institute of Technology in August 1990 The aim of the conference was to provide an opportunity for the discussion of recent results by geometers and number theorists on zeta functions in several different categories The exchange of ideas produced new insights on various geometric zeta functions as well as the classical zeta functions The zeta functions covered here are the Selberg zeta functions the Ihara zeta functions spectral zeta functions and those associated with prehomogeneous vector spaces Accessible to graduate students with background in geometry and number theory Zeta Functions in Geometry will prove useful for its presentation of new results and up to date surveys   *Zeta Functions in Algebra and Geometry* Antonio Campillo,2012 The volume contains the proceedings of the Second International Workshop on Zeta Functions in Algebra and Geometry held May 3 7 2010 at the Universitat de les Illes Balears Palma de Mallorca Spain Zeta functions can be naturally attached to several mathematical objects including fields groups and algebras The conference focused on the following topics arithmetic and geometric aspects of local topological and motivic zeta functions Poincare series of valuations zeta functions of groups rings and representations prehomogeneous vector spaces and their zeta functions and height zeta functions This book is published in cooperation with Real Sociedad Matematica Espanola RSME   *Zeta-functions* Alan David Thomas,1977

  Dynamical, Spectral, and Arithmetic Zeta Functions Michel Laurent Lapidus,Machiel Van Frankenhuysen,2001 The original zeta function was studied by Riemann as part of his investigation of the distribution of prime numbers Other sorts of zeta functions were defined for number theoretic purposes such as the study of primes in arithmetic progressions This led to the development of L functions which now have several guises It eventually became clear that the basic construction used for number theoretic zeta functions can also be used in other settings such as dynamics geometry and spectral theory with remarkable results This volume grew out of the special session on dynamical spectral and arithmetic zeta functions held at the annual meeting of the American Mathematical Society in San Antonio but also includes four articles that were invited to be part of the collection The purpose of the meeting was to bring together leading researchers to find links and analogies between their fields and to explore new methods The papers discuss dynamical systems spectral geometry on hyperbolic manifolds trace formulas in geometry and in arithmetic as well as computational work on the Riemann zeta function Each article employs techniques of zeta functions The book unifies the application of these techniques in spectral geometry fractal geometry and number theory It is a comprehensive volume offering up to date research It should be useful to both graduate students and confirmed researchers   **Fractal Geometry and Number Theory** Michel L. Lapidus,Machiel van Frankenhuysen,2013-12-01 A fractal drum is a bounded open subset of R m with a fractal boundary A difficult problem is to

describe the relationship between the shape geo metry of the drum and its sound its spectrum In this book we restrict ourselves to the one dimensional case of fractal strings and their higher dimensional analogues fractal sprays We develop a theory of complex di mensions of a fractal string and we study how these complex dimensions relate the geometry with the spectrum of the fractal string We refer the reader to Berrl 2 Lapl 4 LapPol 3 LapMal 2 HeLapl 2 and the ref erences therein for further physical and mathematical motivations of this work Also see in particular Sections 7 1 10 3 and 10 4 along with Ap pendix B In Chapter 1 we introduce the basic object of our research fractal strings see Lapl 3 LapPol 3 LapMal 2 HeLapl 2 A standard fractal string is a bounded open subset of the real line Such a set is a disjoint union of open intervals the lengths of which form a sequence which we assume to be infinite Important information about the geometry of c is contained in its geometric zeta function c 8 L lj j l 2 Introduction We assume throughout that this function has a suitable meromorphic ex tension The central notion of this book the complex dimensions of a fractal string c is defined as the poles of the meromorphic extension of c   <u>Fractal Geometry, Complex Dimensions and Zeta Functions</u> Michel Lapidus,Machiel van Frankenhuijsen,2006-08-10 Number theory spectral geometry and fractal geometry are interlinked in this study of the vibrations of fractal strings that is one dimensional drums with fractal boundary The Riemann hypothesis is given a natural geometric reformulation in context of vibrating fractal strings and the book offers explicit formulas extended to apply to the geometric spectral and dynamic zeta functions associated with a fractal   **An Introduction to the Theory of Local Zeta Functions** Jun-ichi Igusa,2000 This book is an introductory presentation to the theory of local zeta functions Viewed as distributions and mostly in the archimedean case local zeta functions are also called complex powers The volume contains major results on analytic and algebraic properties of complex powers by Atiyah Bernstein I M Gelfand S I Gelfand and Sato Chapters devoted to p adic local zeta functions present Serre s structure theorem a rationality theorem and many examples found by the author The presentation concludes with theorems by Denef and Meuser Information for our distributors Titles in this series are co published with International Press Cambridge MA   <u>ZETA-FUNCTIONS: AN INTRODUCTION TO ALGEBRAIC GEOMETRY- NOTES BASED ON A POST- GRADUATE SEMINAR COURSE.</u> ,   *Zeta Functions of Graphs* Audrey Terras,2010-11-18 Graph theory meets number theory in this stimulating book Ihara zeta functions of finite graphs are reciprocals of polynomials sometimes in several variables Analogies abound with number theoretic functions such as Riemann Dedekind zeta functions For example there is a Riemann hypothesis which may be false and prime number theorem for graphs Explicit constructions of graph coverings use Galois theory to generalize Cayley and Schreier graphs Then non isomorphic simple graphs with the same zeta are produced showing you cannot hear the shape of a graph The spectra of matrices such as the adjacency and edge adjacency matrices of a graph are essential to the plot of this book which makes connections with quantum chaos and random matrix theory plus expander Ramanujan graphs of interest in computer science Created for beginning graduate students the book will also appeal to researchers Many well chosen illustrations and

exercises both theoretical and computer based are included throughout **History of Zeta Functions** Robert Spira,1999 **Zeta-functions in Adele Geometry** Tamio Ono,1968 **Higher Regulators, Algebraic K-theory, and Zeta Functions of Elliptic Curves** Spencer Bloch,2000 These are the collected Irvine lectures by Spencer Bloch Delivered in 1978 at the University of California at Irvine these lectures turned out to be an entry point to several intimately connected new branches of arithmetic algebraic geometry such as regulators and special values of L functions of algebraic varieties explicit formulas for them in terms of polylogarithms the theory of algebraic cycles and eventually the general theory of mixed motives which unifies and underlies all of the above and much more Fractal Geometry and Dynamical Systems in Pure and Applied Mathematics: Fractals in pure mathematics David Carfi,Michel Laurent Lapidus,Erin P.
