Study And Teaching:

How to Study Frank M. McMurry, 2015-06-26 Excerpt from How to Study And Teaching How to Study Some seven or eight years ago the question of how to teach children to study happened to be included in a list of topics that I hastily prepared for discussion with one of my classes On my later examination of this problem I was much surprised both at its difficulty and scope and also at the extent to which it had been neglected by teachers Ever since that time the two questions How adults should study and How children should be taught to study have together been my chief hobby The following ideas are partly the result of reading but since there is a meagre quantity of literature bearing on this general theme they are largely the result of observation experiment and discussion with my students Many of the latter will recognize their own contributions in these pages for I have endeavored to preserve and use every good suggestion that came from them and I am glad to acknowledge here my indebtedness to them In addition I must express my thanks for valuable criticisms to my colleague Dr George D Strayer and also to Dr Lida B Earhart whose suggestive monograph on the same general subject has just preceded this publication About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *An Introduction to the Study of Education and to Teaching* Ellwood Patterson Cubberley, 1925 [How to Study and Teaching](#) [How to Study](#) Frank M. McMurry, James Zimmerhoff, 2017-08-07 Some seven or eight years ago the question of how to teach children to study happened to be included in a list of topics that I hastily prepared for discussion with one of my classes On my later examination of this problem I was much surprised both at its difficulty and scope and also at the extent to which it had been neglected by teachers Ever since that time the two questions How adults should study and How children should be taught to study have together been my chief hobby The following ideas are partly the result of reading but since there is a meagre quantity of literature bearing on this general theme they are largely the result of observation experiment and discussion with my students Many of the latter will recognize their own contributions in these pages for I have endeavored to preserve and use every good suggestion that came from them and I am glad to acknowledge here my indebtedness to them In addition I must express my thanks for valuable criticisms to my colleague Dr George D Strayer and also to Dr Lida B Earhart whose suggestive monograph on the same general subject has just preceded this publication The Author Part I Present Methods of Study Nature of Study and Its Principal Factors Chapter I Indications That Young People Do Not Learn to Study Properly The SERIOUSNESS OF THE EVIL No doubt every one can recall peculiar methods of study that he or some one else has at some

time followed During my attendance at high school I often studied aloud at home along with several other temporary or permanent members of the family I remember becoming exasperated at times by one of my girl companions She not only read her history aloud but as she read she stopped to repeat each sentence five times with great vigor Although the din interfered with my own work I could not help but admire her endurance for the physical labor of mastering a lesson was certainly equal to that of a good farm hand for the same period of time This way of studying history seemed extremely ridiculous But the method pursued by myself and several others in beginning algebra at about the same time was not greatly superior Our text book contained several long sets of problems which were the terror of the class and scarcely one of which we were able to solve alone We had several friends however who could solve them and by calling upon them for help we obtained the statement for each one All these statements I memorized and in that way I was able to pass off the subject A few years later when a school principal I had a fifteen year old boy in my school who was intolerably lazy His ambition was temporarily aroused however when he bought a new book and began the study of history He happened to be the first one called upon in the first recitation and he started off finely But soon he stopped in the middle of a sentence and sat down When I asked him what was the matter he simply replied that that was as far as he had got Then on glancing at the book I saw that he had been reproducing the text verbatim and the last word that he had uttered was the last word on the first page These few examples suggest the extremes to which young people may go in their methods of study The first instance might illustrate the muscular method of learning history the second the memoriter method of reasoning in mathematics I have never been able to imagine how the boy in the third case went about his task hence I can suggest no name for his method While these methods of study are ridiculous I am not at all sure that they are in a high degree exceptional
