Systems Of Nominal Classification:

Systems of Nominal Classification Gunter Senft,2000-08-03 This book first published in 2000 addresses the fundamental linguistic question of how the perceived world is expressed through systems of nominal classification that are grammatically encoded in various languages A team of leading international scholars reviews the whole spectrum of nominal classification from gender systems through to numeral classifiers providing cutting edge theoretical interpretations and empirical case studies based on a wide range of languages The volume presents ideas about the problems of classification advances theory by proposing typological categories and clarifies the interface between anthropological and grammatical work Focusing on systems that have a conceptual semantic basis the contributors reflect and represent approaches in nominal classification research This invaluable reference work will appeal to linguists anthropologists and psychologists alike as well as specialists in languages as diverse as Australian Amazonian Mayan and Japanese **what do we really know about nominal classification systems?** , **Nominal Classification** Marcin Kilarski,2013-12-18 This book offers the first comprehensive survey of the study of gender and classifiers throughout the history of Western linguistics Based on an analysis of over 200 genetically and typologically diverse languages the author shows that these seemingly arbitrary and redundant categories play in fact a central role in the lexicon grammar and the organization of discourse As a result the often contradictory approaches to their functionality and semantic motivation encapsulate the evolving conceptions of such issues as cognitive and cultural correlates of linguistic structure the diverse functions of grammatical categories linguistic complexity agreement phenomena and the interplay between lexicon and grammar The combination of a typological and historiographic perspective adopted here allows the reader to appreciate the detail and insight of earlier supposedly prescientific accounts in light of the data now available and to examine contemporary discussions in the context of prevailing conceptions in the study of language at different points in its history since antiquity *Verb Classification in Australian Languages* William B. McGregor,2013-06-10 This book deals with systems of verb classification in Australian Aboriginal languages with particular focus on languages of the north west It proposes a typology of the systems according to their main formal and semantic characteristics It also makes some proposals concerning the historical origins and grammaticisation of these systems and suggestions regarding the grammatical relations involved In addition an attempt is made to situate the phenomenon of verb classification within the context of related verbal phenomena such as serial verb constructions nominal incorporation and complex predicates **Systems of Norminal Classification: a Concluding Discussion** , **Non-canonical Gender Systems** Sebastian Fedden,Jenny Audring,Greville G. Corbett,2018 This book explores the boundaries of the category of gender and their theoretical significance within the framework of Canonical Typology International experts analyse a variety of gender systems from a range of typologically diverse languages from across the world from South America to Melanesia and from Central Italy to Northern Australia **The Typology and Diachrony of Nominal Classification** Matthias

Benjamin Passer,2016 There are two ways for a language to classify its nouns either by means of classifiers which specify the semantics of the classified noun or by means of grammatical gender which groups all nouns of a language into formal classes This thesis investigates the common assumption that classifier systems may develop into grammatical gender systems Because this diachronic phenomenon has not yet been documented for any language the likeliness that such a development would occur is examined by means of a typological study of synchronic systems In analyzing the data this study adopts a new perspective on the development of nominal classification by separating how the means of formal expression develops from the development of those components that have to do with a system s semantic transparency This twofold account for the data from a variety sample of 40 languages shows that there is indeed a number of systems that lie at the intersection of classifiers and gender systems but that a direct shift from classifier to gender is not likely to occur   The Languages and Linguistics of Mainland Southeast Asia Paul Sidwell,Mathias Jenny,2021-08-23 The handbook will offer a survey of the field of linguistics in the early 21st century for the Southeast Asian Linguistic Area The last half century has seen a great increase in work on language contact work in genetic theoretical and descriptive linguistics and since the 1990s especially documentation of endangered languages The book will provide an account of work in these areas focusing on the achievements of SEAsian linguistics as well as the challenges and unresolved issues and provide a survey of the relevant major publications and other available resources We will address Survey of the languages of the area organized along genetic lines with discussion of relevant political and cultural background issues Theoretical descriptive and typological issues Genetic classification and historical linguistics Areal and contact linguistics Other areas of interest such as sociolinguistics semantics writing systems etc Resources major monographs and monograph series dictionaries journals electronic data bases etc Grammar sketches of languages representative of the genetic and structural diversity of the region

Anthropological Linguistics ,2005   *Nominal Classification in Asia and Oceania* Marc Allassonnière-Tang,Marcin Kilarski,2023-12-01 Linguists have long been interested in systems of nominal classification due to their diverse functions as well as cognitive and cultural correlates Among others ongoing research has focused on semantic functional and morphosyntactic properties of complex systems such as co occurring gender and numeral classifiers Such approaches have typically focused on the languages of north western South America and Papua New Guinea This volume proposes to fill in a gap in existing research by focusing on Asia based on case studies from languages belonging to a wide range of families i e Austroasiatic Austronesian Dravidian Hmong Mien Indo European Mongolic Sino Tibetan and Tai Kadai as well as the language isolate Nivkh Gender and classifiers in these languages are approached within several different perspectives i e functional typological and diachronic thus revealing complex patterns in their lexical and pragmatic functions as well as origin development and loss Describing and analysing such properties is a unique and innovative contribution of the volume
