## **Space Relations:**

Time and Space Barry Dainton, 2016-04-15 The first edition 2001 of this title quickly established itself on courses on the philosophy of time and space This fully revised and expanded new edition sees the addition of chapters on Zeno's paradoxes speculative contemporary developments in physics and dynamic time making the second edition once again unrivalled in its breadth of coverage Surveying both historical debates and the ideas of modern physics Barry Dainton evaluates the central arguments in a clear and unintimidating way and is careful to keep the conceptual issues throughout comprehensible to students with little scientific or mathematical training The book makes the philosophy of space and time accessible for anyone trying to come to grips with the complexities of this challenging subject With over 100 original line illustrations and a full glossary of terms the book has the requirements of students firmly in sight and will continue to serve as an essential textbook for philosophy of time and space courses

Space Relations Donald Barr, 1974 **The Shape of Space** Graham Nerlich, 1994-08-04 This is a revised and updated edition of Graham Nerlich's classic book 1976 It develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories Arguing that geometrical explanation is very like causal explanation Professor Nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently Along the way Professor Nerlich criticizes and rejects conventionalism as a non realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion

Toward a Directionalist Theory of Space H. Scott Hestevold, 2020-07-02 In Toward a Directionalist Theory of Space On Going Nowhere H Scott Hestevold formulates a new relationalist theory of space by appealing to the view that the universe is directioned in the sense that there exist directional relations a class of spatial relations that Leibniz overlooked Extending the directionalist relationalist theory of space to the problem of when it is that discrete objects compose a whole Hestevold revisits his answer to the Special Composition Question He also uses the directionalist relationalist theory to formulate reductivist theories of boundaries and holes theories that may allow one to resist the view that boundaries and holes are ontologically parasitic entities Finally he explores directionalism relationalism vis vis spacetime After noting findings of modern physics that favor substantivalist spacetime and then developing metaphysical concerns that favor instead directionalist relationalist spacetime Hestevold notes the ontological benefit of endorsing spatiotemporal directional relations even if spacetime substantivalism is the winning theory
