Spatiotemporal Databases:

Spatio-Temporal Databases Rita de Caluwe, Guy de Tré, 2004-08-12 Spatio Temporal Databases explores recent trends in flexible querying and reasoning about time and space related information in databases It shows how flexible querying enhances standard querying expressiveness in many different ways with the aim of facilitating extraction of relevant data and information Flexible spatial and temporal reasoning denotes qualitative reasoning about dynamic changes in the spatial domain characterized by imprecision or uncertainty or both Many of the contributions focus on GIS while some others are more general or focus on related application fields presenting theoretical viewpoints and techniques that are inspiring or can be adapted for GIS The first part bundles the contributions on advances at the theoretical level also discussing examples and opening further perspectives The second part presents contributions on well developed applications The authors explain how to handle imprecision and uncertainty demonstrating how advanced techniques can help to solve diverse problems related to GIS

Spatio-Temporal Databases Manolis Koubarakis, 2003-08-04 This book is an introduction and source book for practitioners graduate students and researchers interested in the state of the art and practice in spatiotemporal databases It collects the most important and representative research carried out in the project CHOROCHRONOS and presents it in a unified fashion CHOROCHRONOS was a Training and Mobility Research Network funded by the European Commission with the objective to study the design implementation and application of spatiotemporal database management systems This book would never have been possible if it was not for the devoted work of many people First and foremost we would like to thank the authors of the nine chapters of this book for their hard work We would also like to acknowledge the help of Christiane Bernard our officer from the European Commission who saw the project to its conclusion working as hard as we did to make it a thorough success The constructive comments and feedback of our reviewer Colette Roland University of Paris 1 are also very much appreciated Last but not least we would like to thank all the students and postdoctoral fellows who were trained during CHOROCHRONOS We hope the time they spent at CHOROCHRONOS node institutions was rewarding and lots of fun

Spatio-Temporal Databases Marcos R. Vieira, Vassilis J. Tsotras, 2013-10-15 This brief presents several new query processing techniques called complex motion pattern queries specifically designed for very large spatio temporal databases of moving objects The brief begins with the definition of flexible pattern queries which are powerful because of the integration of variables and motion patterns This is followed by a summary of the expressive power of patterns and flexibility of pattern queries The brief then present the Spatio Temporal Pattern System STPS and density based pattern queries STPS databases contain millions of records with information about mobile phone calls and are designed around cellular towers and places of interest Density based pattern queries capture the aggregate behavior of trajectories as groups Several evaluation algorithms are presented for finding groups of trajectories that move together in space and time i e within a predefined distance to each other Finally the brief describes a generic framework called DivDB for diversifying query results Two new evaluation methods as well as several existing ones are described and tested in the proposed DivDB framework The efficiency and effectiveness of all the proposed complex motion pattern queries are demonstrated through an extensive experimental evaluation using real and synthetic spatio temporal databases This clear evaluation of new query processing techniques makes Spatio Temporal Database a valuable resource for professionals and researchers studying databases data mining and pattern recognition
