**X-Ray Optics and X-Ray Microanalysis** H. H. Pattee, V. E. Cosslett, Arne Engström, 2013-10-22 X-ray Optics and X-ray Microanalysis covers the proceedings of the Symposium on X-ray Optics and X-ray Microanalysis held at Stanford University on August 22-24, 1962. The book focuses on X-ray microscopy, microradiography, radiation and irradiation, and X-ray microanalysis. The selection first offers information on the methods of X-ray microscopy and X-ray absorption microanalysis. Discussions focus on X-ray scanning microscopy, contact microradiography, point projection microscopy, and total dry weight determinations. The text then takes a look at X-ray microanalysis in biology and medicine, electron microscopic enlargements of X-ray absorption micrographs, and automation in microradiography. The publication examines the production of Fresnel zone plates for extreme ultraviolet and soft X-radiation, quantitative microradiographic studies of human epidermis, and irradiation effect on total organic nerve cell material determined by integrating X-ray absorption. The manuscript then reviews the calculation of fluorescence excited by characteristic radiation in the X-ray microanalyzer and the method for calculating the absorption correction in electron probe microanalysis. The selection is a valuable reference for readers interested in X-ray technology.

Internationaler Kongreß für Röntgenoptik und Mikroanalyse / Ve Congrès International sur l'Optique des Rayons X et la Microanalyse** Gottfried Möllenstedt, K.H. Gaukler, 2013-06-29 The Fifth International Congress on X-Ray Optics and Microanalysis was organized by the Institute of Applied Physics at Tübingen University in Western Germany from September 9th through 14th, 1968. Since 1956, when the First Conference was arranged in Cambridge, England, by one of the pioneers in this field, V. E. Cosslett, the experts in the fields of X-Ray Optics and Microanalysis have met every third year to exchange their scientific experiences. Later meetings were held at Uppsala, Sweden, in 1959; at Stanford, California, in 1962; and at Orsay, France, in 1965. The participants in the 1968 Conference came from the following countries: Germany 140, France 60, Great Britain 55, USA 20, Netherlands 16, Switzerland 12, Austria 9, Sweden 7, Belgium 6, Japan 5, Italy 4, two each from Israel, Yugoslavia, Canada, Norway, Hungary, and one each from Argentina, Poland, South Africa. As at the latest congress in Paris, the following central topics were treated: General problems of X-ray optics, physical bases of electron beam microanalysis, quantitative problems of X-ray microanalysis, instrumentation, microdiffraction, applications to metalurgy, mineralogy, and biology. An exhibition showing some of the most modern instruments formed an important part of the conference. The Springer Verlag Heidelberg deserves thanks for the careful and speedy work they have performed in printing these conference proceedings. We are further indebted to all contributors of this volume for their kind cooperation. Tübingen, August 1969, G. M. MÖLLENSTEDT and K. H. present volume also the result of a gathering of international experts in 1988 at NBS now the National Institute of Standards and Technology NIST is intended to fulfill the same purpose After years of substantial agreement on the procedures of analysis and data evaluation several sharply differentiated approaches have developed These are described in this publication with all the details required for practical application Neither the editors nor NIST wish to endorse any single approach Rather we hope that their exposition will stimulate the dialogue which is a prerequisite for technical progress Additionally it is expected that those active in research in electron probe microanalysis will appreciate more clearly the areas in which further investigations are warranted
