Hands-On Problem Solving, Grade 3 Jennifer Lawson,Dianne Soltess,Denise MacRae,2012-10-23 Math problem solving activities **Solving the Mystery of Chinese Magic Squares** Fung-Yuel Chang,2017-01-11 The 4000 year old mystery of Chinese magic squares is finally solved Magic squares have fascinated ordinary and serious mathematicians alike for four thousand years Great Yu discovered the first three by three magic square on the back of a turtle around the year 2200 B C before he was crowned the first emperor in China Some three thousand years later in 1275 Yang Hui amused his countrymen with riddles describing the creations of third and fourth order magic squares Two hundred forty years later in

1514 Albrecht Durer unknowingly applied Yang Hui's diagonal reversal scheme to produce in the Western world the first magic square. Some eighty years later in 1593 another Chinese mathematician Cheng Darwai produced a sixth order magic square with a unique magic sum in every row every column but only in each of its twin diagonals known as the main and secondary diagonals. In this book for the first time F Y Chang has deciphered Yang Hui's riddles and extends both ancient Chinese mathematician's works and develops algorithms to create magic squares beyond the computation capacity of super computers. He formulates techniques such as parametric matrix formulation row column sum equalization triple orthogonal transformation and diagonal switching for creation of the classical Chinese magic squares. He discovered the super diagonal Chinese magic squares with the magic sum in every generalized diagonal including the two conventional diagonals as well as an even number of four segment split diagonals. Dr Chang also introduces the idea of Chinese magic square games which anyone of any age who is a number enthusiast can solve either by logical reasoning or by solving parametric linear equations.

Masters of Mathematics Robert A. Nowlan, 2017-05-13. The original title for this work was *Mathematical Literacy: What Is It and Why You Need It*. The current title reflects that there can be no real learning in any subject unless questions of who, what, when, where, why, and how are raised in the minds of the learners. The book is not a mathematical text and there are no assigned exercises or exams. It is written for reasonably intelligent and curious individuals, both those who value mathematics, aware of its many important applications, and others who have been inappropriately exposed to mathematics leading to indifference to the subject, fear, and even loathing. These feelings are all consequences of meaningless presentations, rote learning, and being lost as to the purpose of what is being studied. Mathematics education needs a radical reform. There is more than one way to accomplish this. Here the author presents his approach of wrapping mathematical ideas in a story. To learn, one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them. What is necessary to be mathematically literate is not about solving algebraic equations or even making a geometric proof. These are valuable skills but not evidence of literacy. We often seek answers but learning to ask pertinent questions is the road to mathematical literacy. Here is the good news: new mathematical ideas have a way of finding applications. This is known as the unreasonable effectiveness of mathematics.

Sudoku Seymour S.
