Submersible Technology: Adapting to Change Society for Underwater Technology (SUT), 1988-02-29. To maintain quality in research output providing the necessary new knowledge for our developing industries must be of prime importance to our community. This is an extremely difficult task when viewed in the context of the rapid rate of change being experienced within our national industrial scene. Collaborative research programmes designed to constantly monitor and improve the quality of output through regular reporting and assessment of achieved goals against defined targets can help the growth of our industry and benefit the rest of society. The government has established initiatives to encourage collaboration and the transfer of technology between the research and development domains. There are many signs that industry and the universities are making a concerted effort to adapt their working practices and relationships to meet the rapidly changing industrial environment. There are still many shortfalls and areas for improvement. Some of the extremes of government educational policy can and will seriously impair the evolution of and benefits gained from the collaboration initiatives. These must be resisted by academe and industry alike if we are to make new advances against foreign competition. Joint R and D projects do work and can be made to work. To achieve the steady growth of healthy and fruitful relationships they must however be given a good environment and a nourishing diet.

Subsea Control and Data Acquisition Society for Underwater Technology (SUT), 1990-03-31. The biennial conferences of the Society for Underwater Technology have achieved an excellent reputation for the quality of their presentations which cover topics of the most acute current interest as well as those at the forefront of review and development. The 1994 conference on Subsea Control and Data Acquisition formed no exception since it covers subjects at the cutting edge of modern technology. It is a matter of increasing concern that products are becoming overspecified resulting in excessive costs and longer development schedules while not conferring an equivalent benefit in reliability of the finished product. Subsea Control and Data Acquisition is vital reading for all subsea control system designers manufacturers and operators equipment consultants application engineers academics in the subsea engineering field and all subsea engineers.
