**Body Sensations** Ferenc Köteles, 2021-02-23 The monograph aims to present the recent scientific knowledge on body sensations i.e. conscious experiences that are localized or felt in the body from an internal perspective regardless of their sensory origin. Moreover, related phenomena such as emotions, the placebo and nocebo effect, complementary and alternative medicine, and mind-body practices are discussed from the perspective of body sensations.

**Encyclopedia of Perception** E. Bruce Goldstein, 2010 Because of the ease with which we perceive many people see perception as something that just happens. However, even seemingly simple perceptual experiences involve complex underlying mechanisms which are often hidden from our conscious experience. These mechanisms are being investigated by researchers and theorists in fields such as psychology, cognitive science, neuroscience, computer science, and philosophy. A few examples of the questions posed by these investigations are: What do infants perceive? How does perception develop? What do perceptual disorders reveal about normal functioning? How can information from one sense such as hearing be affected by information from another sense such as vision? How is the information from all of our senses combined to result in our perception of a coherent environment? What are some practical outcomes of basic research in perception? These are just a few of the questions this encyclopedia will consider as it presents a comprehensive overview of the field of perception for students, researchers, and professionals in psychology, the cognitive sciences, neuroscience, and related medical disciplines such as neurology and ophthalmology.

**Acta Biologica Hungarica**, 1999 *Hyperalgesia* International Association for the Study of Pain. Research Symposium, Hermann Otto Handwerker, 2004 All health care professionals dealing with pain states are concerned with hyperalgesia. For the basic scientist, hyperalgesia is a fascinating consequence of the plasticity of the nociceptive nervous system. Our knowledge on the pathomechanisms of different forms of hyperalgesia has greatly increased during recent years. Refined analysis methods have provided new insights at all levels of the nervous system from primary afferents to cortical processing. Methods of molecular biology have allowed for analysis at the level of genomic processing with fascinating consequences for the study of drug actions. Because of their great impact for the future development of the field, these recent advances are of interest to everybody in the pain field.
