Unequal Exchange:

Unequal Exchange Arghiri Emmanuel, 2025-07-01 As neo colonialism continues to run rampant some nations continue to grow rich at the expense of others For two centuries David Ricardo s theory of comparative costs has dominated investigation of this problem and has still provided no answer to the inequality that arises as a result of free trade within a global capitalist system Emmanuel s path breaking study now itself a classic upends the conventional assumptions subjecting the phenomena of international trade to critical scrutiny both systematically and with logical rigor It integrates the theory of international value and unequal exchange into the general theory of value as propounded by the classical economists and Marx Emmanuel s theory of unequal exchange generated a widespread world debate on its first appearance part of which emanating from French economist Charles Bettelheim is included in this volume It has remained the foundation of critical analysis of international exchange relations ever since and has gained even more importance today in the age of global value chains *Unequal Exchange and the Evolution of the World System* Kunibert Raffer, 1987-06-18

The Theory of Unequal Exchange Richard Brown, 1978 **Economic Development** John Eatwell, Murray Milgate, Peter Newman, 1989 First published in the New Palgrave a dictionary of economics in four volumes 1987 T p verso Includes bibliographical references

Exploitation, Unequal Exchange, and Dependency Paul O. Otubusin, 1992 There is no more central concept in contemporary Marxian theory than that of exploitation Western analytical Marxists have refined and revised the concept Third World theorists have extended it from class to country Political regimes have drawn policy conclusions Dr Otubusin has constructed a framework within which to situate these developments one which highlights the normative presuppositions of the various theorists He has managed a synthesis of a vast amount of quite diverse literature and has offered a cogent critical analysis Dr Otubusin has exploited his training in both philosophy and political science to produce a compelling piece of work *Climate Justice Now* Rebecca Marwege, Nikhar Gaikwad, Joerg Schaefer, 2026-03-10 Climate change is not only an environmental crisis but also a catalyst for worsening socioeconomic inequalities leading to widespread calls for climate justice Even though this term has become increasingly common there remains no universally accepted definition This challenge is compounded by the limitations of traditional scholarly frameworks which struggle to encompass the dynamic and pervasive impact of the climate crisis across global national and local levels The scope of the crisis requires ethical social and political considerations alongside scientific and environmental insights in order to shape equitable responses by states and societies This multidisciplinary book offers a comprehensive exploration of debates on climate justice across the natural sciences social sciences and humanities Synthesizing these divergent approaches it develops a new conceptual framework that transcends disciplinary divides providing a deeper and richer understanding of climate justice Contributors make an urgent case that climate justice must be centered within and across disciplines creating a roadmap for multidisciplinary research and pedagogy on the climate crisis Featuring a wide range of voices and actionable

recommendations this timely book illuminates how scholarship on climate change can become a call to action

Capitalism in the Anthropocene John Bellamy Foster,2022-08-23 Over the last 11 700 years during which human civilization developed the earth has existed within what geologists refer to as the Holocene Epoch Now science is telling us that the Holocene Epoch in the geological time scale ended replaced by the onset of a new more dangerous Anthropocene Epoch which began around 1950 The Anthropocene Epoch is characterized by an anthropogenic rift in the biological cycles of the Earth System marking a changed reality in which human activities are now the main geological force impacting the earth as a whole generating at the same time an existential crisis for the world s population What caused this massive shift in the history of the earth In this comprehensive study John Bellamy Foster tells us that a globalized system of capital accumulation has induced humanity to foul its own nest The result is a planetary emergency that threatens all present and future generations throwing into question the continuation of civilization and ultimately the very survival of humanity itself Only by addressing the social aspects of the current planetary emergency exploring the theoretical historical and practical dimensions of the capitalism s alteration of the planetary environment is it possible to develop the ecological and social resources for a new journey of hope

Inequalising Trade? John Spraos, 1983 This book examines the dissatisfaction of the poor countries of the South with the role they have been assigned as exporters of primary commodities in return for imports of manufactures from the rich countries of the North **Value and Unequal Exchange in International Trade** Andrea Ricci, 2021-05-19 Contrary to the claims made by neoliberal governments and mainstream academics this book argues that the huge increase in trade in recent decades has not made the world a fairer place instead the age of globalization has become a time of mass migration caused by increasing global inequality The theory of unequal exchange challenges the free trade doctrine claiming that transfers of value from poorer to richer countries are hidden behind apparently equivalent market transactions Following a critical review of the existing approaches the book proposes a general theory of unequal exchange in the light of an innovative reconstruction of Marx's international law of value in which money and exchange rates play a crucial role in decoupling value

captured from value produced by different countries even in perfectly competitive world markets On this theoretical basis the book provides an empirical analysis of the international transfers of value in both traditional trade and Global Value Chains The resulting world mapping of unequal exchange shows the geographical hierarchy of capital global exploitation by revealing a world divided into two quite separate camps of donor and receiving countries the former being the poorer countries and the latter the richer countries This book is addressed to scholars and students of economics and social sciences as well as activists of the North and the South interested in a better understanding of the asymmetric power relations implied in global trade It makes a significant contribution to the literature on political economy trade Marxism international relations and economic geography
