Understanding Learning Ruby K. Payne, 2002 Dr Payne has written *Understanding Learning the How the Why the What* to complement her workbook *Learning Structures* which includes numerous strategies to help students learn vital content while building cognitive abilities *Understanding Learning* provides key background information about how and why these strategies work along with a synopsis of brain research and cognitive studies *Understanding Learning and Teaching* Michael Prosser, Keith Trigwell, 1999-02-16 How can university teachers improve the quality of student learning Prosser and Trigwell argue that the answer lies in determining how students perceive their unique learning situations In doing so they draw upon the considerable body of educational research into student learning in higher education which has been developed and published over the past three decades and they enable university teachers to research and improve their own teaching This book outlines the key principles underlying successful teaching and learning in higher education and is a key resource for all university teachers

Understanding How We Learn Yana Weinstein, Megan Sumeracki, Oliver Caviglioli, 2018-08-22 Educational practice does not for the most part rely on research findings Instead there s a preference for relying on our intuitions about what s best for learning But relying on intuition may be a bad idea for teachers and learners alike This accessible guide helps teachers to integrate effective research backed strategies for learning into their classroom practice The book explores exactly what constitutes good evidence for effective learning and teaching strategies how to make evidence based judgments instead of relying on intuition and how to apply findings from cognitive psychology directly to the classroom Including real life examples and case studies FAQs and a wealth of engaging illustrations to explain complex concepts and emphasize key points the book is divided into four parts Evidence based education and the science of learning Basics of human cognitive processes Strategies for effective learning Tips for students teachers and parents Written by The Learning Scientists and fully illustrated by Oliver Caviglioli *Understanding How We Learn* is a rejuvenating and fresh examination of cognitive psychology s application to education This is an essential read for all teachers and educational practitioners designed to convey the concepts of research to the reality of a teacher s classroom

Understanding Effective Learning Des Hewitt, 2008-05-16 Within education concepts such as learning styles learning strategies and independent learning are often cited as important areas for development in schools DFES 1998 2001 but these are rarely

satisfactorily defined It is essential for teachers to develop a detailed understanding of learning across the curriculum as well as appropriate strategies if children are to learn effectively This book explores these important concepts by examining learning in a range of classroom settings and drawing on evidence from teachers and pupils through interviews and observations The focus is two fold to understand learning in the classroom and to develop practices which will support learning Topics explored include Models of learning Learning strategies and the teacher Learning strategies and the learner Assessment for Learning The social dimension of children s learning The book provides a rich mixture of examples reflection points case studies and strategies for the classroom to provide the reader with a wide range of ideas to encourage more effective learning in their classroom Understanding Effective Learning is key reading for student beginning and early career teachers in primary education

Motivation and Learning Noel Mwenda, 2012-05-14 Essay from the year 2012 in the subject Psychology Intelligence and Learning Psychology grade 1 3 University of Dodoma College of Education course Theories of Learning language English abstract Without motivation there is no learning motivation isn t everything but it is a necessary condition for success in truth much of what passes for teaching is demotivating even advanced learners do not take readily to sitting in a classroom lecture theater conference hall or training room if they are not stimulated and motivated Clark 2007 Rao et al 2006 Of course motivation is not the same thing as learning and learning is not wholly down to motivation and there are many factors that affect both motivation and learning that are beyond the learner s control Clark 2007 However in an age where there s fierce competition for the attention of learners we are duty bound to recognize that motivation matters ibid The present work motivation and learning is prepared to provide a conceptualization of learning learning processes as well as characteristics of learning Furthermore this work provides a conceptualization of motivation and the way motivation is linked to learning it also acquaints a reader to sources of motivation and the theories that describe motivation Of greatest importance the work provides techniques of developing motivation in classroom as well as in learning

The Process of Learning about Static Electricity and the Role of the Computer Simulator Valerie K. Otero, 2001 The concepts investigated in this study stemmed from two things First a pilot study where we found that the static electricity simulator results coupled with the CPU pedagogical structure provided facilitated the articulation and sharing of ideas in a small group of three students From this we hypothesized that the simulator tools played a role in knowledge construction and we wanted to find out more about what role it played Second the past ten years of research in mathematics and science education has led to the recognition of the importance of the instructional setting collaboration and cognitive tools in the construction of knowledge A tradition has emerged where researchers have begun to look at the

individual's knowledge construction through a different lens than the knowledge that emerges through group interactions. From this type of research we can learn about the knowledge construction of the individual and the knowledge construction of the group. We can understand how the interactions within the group have influenced the knowledge development of the individual. However, we cannot learn about how the individual influences the group parameters. Repeated interactions between individuals and tools can fundamentally change the social and material setting. We need to look at how the social and material setting changes as a result of the individual's interaction with it and how this changing social setting influences the conceptual development of the individual. Investigating interdependent interaction between the individual and the social and material setting is the foundation for this work. I believe that understanding learning requires more than understanding the individual and understanding the social environment of which he was a part. Understanding learning means understanding how the individual changes the social and material setting and how these changes influence the individual. This dissertation is devoted to understanding individuals learning the factors that influenced it and further understanding how these factors were determined by the knowledge evolution of the individual.
