recognizing the need to enhance the dialogue between different sectors pre consumer waste is particularly interesting for the recycling market because the construction sector can reduce its environmental impacts by enhancing its capacity to use secondary raw materials and by products from other sectors and lastly the manufacturing sector is currently experimenting with promising forms of reducing recycling pre consumer waste and is at the same time providing by products that can be used in other production chains As such the book offers a valuable asset for professionals who are interested in sustainability in construction and in the study of construction products however it will be equally useful for local decision makers tasked with implementing development policies and innovations in the industrial sector
