Markov Random Fields for Vision and Image Processing Andrew Blake, Pushmeet Kohli, Carsten Rother, 2011-07-22 State of the art research on MRFs successful MRF applications and advanced topics for future study This volume demonstrates the power of the Markov random field MRF in vision treating the MRF both as a tool for modeling image data and utilizing recently developed algorithms as a means of making inferences about images These inferences concern underlying image and scene structure as well as solutions to such problems as image reconstruction image segmentation 3D vision and object labeling It offers key findings and state of the art research on both algorithms and applications After an introduction to the fundamental concepts used in MRFs the book reviews some of the main algorithms for performing inference with MRFs presents successful applications of MRFs including segmentation super resolution and image restoration along with a comparison of various optimization methods discusses advanced algorithmic topics addresses limitations of the strong locality assumptions in the MRFs discussed in earlier chapters and showcases applications that use MRFs in more complex ways as components in bigger systems or with multiterm energy functions The book will be an essential guide to current research on these powerful mathematical tools
