Hartzell, 1998 A phenomenological design with a heuristic attitude was utilized for this study of artists The assumed triangle of aesthetic relationship between the artists and their psychological type their creative process and the observable features of their artwork was investigated To clarify this complicated nexus eight mature professional artists were interviewed representing the types delineated by Carl Jung in his volume *Psychological Types* 1921 1971 The four women and four men exemplified the Sensing Intuitive Thinking and Feeling types in both the introverted and extraverted stances The issues and relationships that were illuminated include the following 1 There was support for the basic assumption of the validity of the triangular inter relatedness of type creative process and artwork 2 The majority of the artists scored either dominant Intuitive or auxiliary Intuitive on the Myers Briggs Type Indicator the instrument used for selection of subjects 3 The artists and types were congruent on the majority of areas discussed in the interviews 4 The creative process in these artists reflected the expected personality characteristics and behaviors of the particular types 5 The artwork varied by function and attitudinal stance to the world in a number of artistic areas 6 These artists subjects appeared to reflect the larger population by their representation of each of the psychological types *Annual Report* National Council of Educational Research and Training (India), 1982 **Panjab University Research Bulletin**, 1977 **The Educational Trends**, 1972 **Art Direction**, 1980 Civism George J. E. Sakkal, 2016-03-22 Throughout history humans have been driven to create visual art From the earliest cave drawings to the work of world renowned modern and postmodern artists our species has an endless capacity to produce and hunger to consume visual representations of human existence Artists and art aficionados have long pondered the source of our endless

creativity How and why do humans thrive on producing art In the past two centuries two theories dominated the philosophy of visual art First Paul Cezanne s popularly accepted modernist theory postulated that our creativity stems from subconscious brain activity while decades later Marcel Duchamp s postmodernist theory upended modernism claiming that artistic creativity stemmed unequivocally from our conscious thoughts and acts For many years these theories remained untestable for without scientific data to enable objective comparative analysis theorists had no way to examine these strikingly different hypotheses In CUVISM collage artist and art educator George J E Sakkal uses precise neuroscientific data to examine the validity of modern and postmodern art theories Sakkal s research offers the first wholly objective analysis of art theory resulting in new paradigms that will benefit art educators and students while forcing the established artistic community to reevaluate their methods
