The Zenith Angle:

Imaging Spectroscopy for Scene Analysis Antonio Robles-Kelly, Cong Phuoc Huynh, 2012-10-30 This book presents a detailed analysis of spectral imaging describing how it can be used for the purposes of material identification object recognition and scene understanding The opportunities and challenges of combining spatial and spectral information are explored in depth as are a wide range of applications Features discusses spectral image acquisition by hyperspectral cameras and the process of spectral image formation examines models of surface reflectance the recovery of photometric invariants and the estimation of the illuminant power spectrum from spectral imagery describes spectrum representations for the interpolation of reflectance and radiance values and the classification of spectra reviews the use of imaging spectroscopy for material identification explores the recovery of reflection geometry from image reflectance investigates spectro polarimetric imagery and the recovery of object shape and material properties using polarimetric images captured from a single view

March 1966 Observations of the Galactic Spur in the 20 to 40 MHz Range Donald A. Guidice, 1967 In March 1966 observations were made at the Arecibo Ionospheric Observatory to map the region of the Galactic Spur North Polar Spur in the 20 40 MHz range Simultaneous observations were made at 38 75 33 45 26 70 and 22 30 MHz using a log periodic feed a four way power divider and individual null balancing radiometers Antenna half power beamwidths were roughly 2 0 degrees at 38 75 and 3 3 degrees at 22 30 MHz The observations were confined to the 2300 0500 local time period to minimize ionospheric effects The area observed was between 12h and 16h right ascension 32 degrees and 2 degrees declination Results are given in the report *The Observations and Photochemistry of Atmospheric Ozone and their Meteorological Significance* Richard Craig, 2016-06-23 The objectives of the American Meteorological Society are the development and dissemination of knowledge of meteorology in all its phases and applications and the advancement of its professional ideals The organization of the Society took place in affiliation with the American Association for the Advancement of Science at Saint Louis Missouri December 29 1919 and its incorporation at Washington D C January 21 1920 The work of the Society is carried on by the Bulletin the Journal and Meteorological Monographs by papers and discussions at meetings of the Society through the offices of the Secretary and the Executive Secretary and by correspondence All of the Americas are represented in the membership of the Society as well as many foreign countries *Aspect Determination for the AFGL Infrared Survey Experiments* Stephan D. Price, 1978 The AFGL probe borne infrared celestial survey experiments are designed to obtain the inertial aspect of the payload reference frame with an accuracy comparable to the spatial size of a resolution element in the infrared telescope Constraining the axis of payload rotation to known inertial coordinates through maintaining lock onto a selected pole star with a star tracker co aligned to the roll axis and by careful geometric alignment of the optical elements and dynamic balancing the payload the desired accuracy was achieved Further refinement in position was obtained from the stellar detections by the infrared sensor with an ultimate knowledge of the inertial aspect being within 1 5 arc minutes root

mean square deviation between the measured and catalogued positions for known infrared stars The procedures used to obtain this accuracy are described Also detailed is a method of aspect determination using only a star mapper with an N slit focal plane reticle Author *The Location of Mineral Fields; Modern Procedure in the Investigation of Mineral Areas and the Subsequent Verification of Their Extent, Etc* Marshall Henry Haddock,1926 **Physics and Chemistry of the Solar System** John S.
