

How Do You Calculate The Force On A Charged Particle Moving In A Magnetic Field?

- The force experienced by a charged particle moving in a magnetic field, known as the Lorentz force, can be calculated using the formula $F = q(v \times B)$, where F is the force, q is the charge, v is the velocity, and B is the magnetic field
- The cross product $(v \times B)$ is calculated as $|v||B|\sin(\theta)n$, where $|v|$ and $|B|$ are the magnitudes of the velocity and magnetic field vectors respectively, θ is the angle between them, and n is the unit vector perpendicular to both
- The direction of the force is perpendicular to both the velocity and magnetic field vectors
- If the velocity is parallel or antiparallel to the field, the force will be zero

Magnetic Forces

in the illustration, F , B , and v are three mutually perpendicular vectors.

The force is always perpendicular to both the magnetic field and velocity.

$$F = qvB \sin \theta$$

or $F = qvB$ if $\theta = 90$
