Verbruggen,2012-12-06 This book is concerned with Artificial Intelligence AI concepts and techniques as applied to industrial
decision making control and automation problems The field of AI has been expanded enormously during the last years due to
that solid theoretical and application results have accumulated During the first stage of AI development most workers in the
field were content with illustrations showing ideas at work on simple problems Later as the field matured emphasis was
turned to demonstrations that showed the capability of AI techniques to handle problems of practical value Now we arrived
at the stage where researchers and practitioners are actually building AI systems that face real world and industrial
problems This volume provides a set of twenty four well selected contributions that deal with the application of AI to such
real life and industrial problems These contributions are grouped and presented in five parts as follows Part 1 General Issues
Part 2 Intelligent Systems Part 3 Neural Networks in Modelling Control and Scheduling Part 4 System Diagnostics Part 5
Industrial Robotic Manufacturing and Organizational Systems Part 1 involves four chapters providing background material
and dealing with general issues such as the conceptual integration of qualitative and quantitative models the treatment of
