Topics In The Foundation Of Statistics:

Topics in the Foundation of Statistics B.C. van Fraassen, 1997-02-28 Foundational research focuses on the theory but theories are to be related also to other theories experiments facts in their domains data and to their uses in applications whether of prediction control or explanation A theory is to be identified through its class of models but not so narrowly as to disallow these roles The language of science is to be studied separately with special reference to the relations listed above and to the consequent need for resources other than for theoretical description Peculiar to the foundational level are questions of completeness specifically in the representation of measurement and of interpretation a topic beset with confusions of truth and evidence and with inappropriate metalinguistic abstraction

Foundations of Statistics for Data Scientists ALAN. KATERI AGRESTI (MARIA.), Maria Kateri, 2024-09-15 Designed as a textbook for a one or two term introduction to mathematical statistics for students training to become data scientists Foundations of Statistics for Data Scientists With R and Python is an in depth presentation of the topics in statistical science with which any data scientist should be familiar including probability distributions descriptive and inferential statistical methods and linear modelling The book assumes knowledge of basic calculus so the presentation can focus on why it works as well as how to do it Compared to traditional mathematical statistics textbooks however the book has less emphasis on probability theory and more emphasis on using software to implement statistical methods and to conduct simulations to illustrate key concepts All statistical analyses in the book use R software with an appendix showing the same analyses with Python The book also introduces modern topics that do not normally appear in mathematical statistics texts but are highly relevant for data scientists such as Bayesian inference generalized linear models for non normal responses e g logistic regression and Poisson loglinear models and regularized model fitting The nearly 500 exercises are grouped into Data Analysis and Applications and Methods and Concepts

Appendices introduce R and Python and contain solutions for odd numbered exercises The book's website has expanded R Python and Matlab appendices and all data sets from the examples and exercises Alan Agresti Distinguished Professor Emeritus at the University of Florida is the author of seven books including Categorical Data Analysis Wiley and Statistics The Art and Science of Learning from Data Pearson and has presented short courses in 35 countries His awards include an honorary doctorate from De Montfort University UK and the Statistician of the Year from the American Statistical Association Chicago chapter Maria Kateri Professor of Statistics and Data Science at the RWTH Aachen University authored the monograph Contingency Table Analysis Methods and Implementation Using R Birkh user Springer and a textbook on mathematics for economists in German She has a long term experience in teaching statistics courses to students of Data Science Mathematics Statistics Computer Science and Business Administration and Engineering The main goal of this textbook is to present foundational statistical methods and theory that are relevant in the field of data science The authors depart from the typical approaches taken by many conventional mathematical statistics textbooks by placing more emphasis on providing the students with intuitive and practical interpretations of those methods with the aid of R programming codes I find its particular strength to be its intuitive presentation of statistical theory and methods without getting bogged down in mathematical details that are perhaps less useful to the practitioners Mintaek Lee Boise State University The aspects of this manuscript that I find appealing 1 The use of real data 2 The use of R but with the option to use Python 3 A good mix of theory and practice 4 The text is well written with good exercises 5 The coverage of topics e g Bayesian methods and clustering that are not usually part of a course in statistics at the level of this book Jason M Graham University of Scranton
