Population and Development Robert L. Cliquet, Kristiaan Thienpont, 2013-04-09 Since the onset of modernisation the world population has doubled several times and will soon reach 6 billion of people The annual rate of increase in the world population is approximately 90 million people This is the largest absolute level of population growth ever recorded According to the most recent population projections of the United Nations the world population will probably double again before stabilising at a stationary level Ninety percent of the present and future population growth is accounted for by developing countries The fast increase in the size of the population in many developing countries is a serious obstacle to their attempts to overcome their backwardness make a substantial improvement to their quality of life and achieve a sustainable way of exploiting their renewable and non renewable resources At the same time non sustainable consumption and production patterns in the industrial countries and among wealthy citizens in developing countries place additional burdens on the planet s natural resources and ecosystems With a view of considering these problems and elaborating policy guidelines the United Nations staged its International Conference on Population and Development ICPD in Cairo Egypt September 5 13 1994 This monograph deals with the background to the ICPD its preparation proceedings and contents It also evaluates its results and recommendations by comparing the ICPD Action Programme with the current scientific literature The ICPD dealt with the key issues concerning the interrelations between population development and environment and their causes and was not limited to marginal issues such as abortion promiscuity and homosexuality as was the impression given in the media as a

result of the way these questions were distorted by the action of religious fundamentalists The ICPD Action Programme forms an impressive charter with a broad range of relevant policy recommendations Nevertheless compared to most of the current scientific literature the ICPD seems to underestimate the seriousness and urgency of the issues at stake

Population Development Challenges in China Pengkun Wu,2020-09-12 This book explores the population development challenges in China It started by analyzing two of the major challenges designing a suitable family planning policy and dealing with the serious provincial population difference It then proposes effective measures to address these challenges by adopting various quantitative methods such as system dynamics nonlinear programming and spatial econometrics in evaluating the effects of different policy scenarios which made the results more scientific and reliable thus the final policy suggestions effective and evidence based The book includes a number of mathematical models and is suitable for graduate students and researchers in population modeling and relevant research areas *The United States and World Development, Agenda 1980* John Williamson Sewell,Overseas Development Council,1980 [Encyclopaedia of Environmental Pollution, Agriculture and Health Hazards: Population development, environment and health](#) A. World Development Report ,1991 This report synthesizes and interprets the lessons of more than forty years of development experience Together with last year s report on poverty and next year s on the environment it seeks to provide a comprehensive overview of the development agenda The 1990s began with dramatic changes as many countries in Eastern Europe and elsewhere initiated ambitious reforms of their economic and political systems Against the backdrop of these transitions this report links the historical debates that counseled policymakers in their past decisions the lessons of experience and the evolving thought on how best to proceed One of the most valuable lessons relates to the interaction between the state and the market in fostering development It describes a market friendly approach in which governments allow markets to function well and in which governments concentrate their interventions on areas in which markets prove inadequate The report looks at four main aspects of the relationship between governments and markets a investing in people b the climate for enterprises to flourish c the integration of countries with the global economy and d a stable macroeconomic foundation for sustained progress The report stresses that above all the future of developing countries is in their own hands Domestic policies and institutions hold the key to successful development **The End of World Population Growth in the 21st Century** Warren C. Sanderson,2013-12-19 The 20th century was the century of explosive population growth resulting

in unprecedented impacts in contrast the 21st century is likely to see the end of world population growth and become the century of population aging We are currently at the crossroads of these demographic regimes This book presents fresh evidence about our demographic future and provides a new framework for understanding the underlying unity in this diversity It is an invaluable resource for those concerned with the implications of population change in the 21st century The End of World Population Growth in the 21st Century is the first volume in a new series on Population and Sustainable Development The series provides fresh ways of thinking about population trends and impacts
