

# World Wide Web

## SURFACE WEB

The portion of the World Wide Web that is indexed by search engines. It can be viewed by general users on standard Web browsers.

## DEEP WEB

This part of the Web extends beyond the reach of typical search engines because it includes unindexed sites, fee-for-service (FFS) content, and private databases such as password-protected e-mail accounts. The deep web comprises the overwhelming majority of online content.

## DARK WEB

An encrypted network that can be accessed only with a specialized browser or application. The most common method of interacting with the dark web is through The Onion Router (Tor), an anonymizing platform that routes encrypted traffic through a series of nodes. Criminal and antisocial behaviour appear to account for the majority of dark web activity.

## The Deep:

**Natural Capital and Exploitation of the Deep Ocean** Maria Baker, Eva Ramirez-Llodra, Paul Tyler, 2020-08-28 The deep ocean is by far the planet's largest biome and holds a wealth of potential natural assets. Human exploitation of the deep ocean is rapidly increasing whilst becoming more visible to many through the popular media, particularly film and television. The scientific literature of deep sea exploitation and its effects has also rapidly expanded as a direct function of this increased national and global interest in exploitation of deep sea resources, both biological (e.g. fisheries, genetic resources) and non-biological (e.g. minerals, oil, gas, methane hydrate). At the same time, there is a growing interest in deep sea contamination, including plastics, with many such studies featured in high-profile scientific journals and covered by global media outlets. However, there is currently no comprehensive integration of this information in any form, and these topics are only superficially covered in classic textbooks on deep sea biology. This concise and accessible work provides an understanding of the relationships between biodiversity and ecosystem functioning, both at the seafloor and in the water column, and how these might be affected as a result of human interaction, exploitation, and ultimately environmental change. It follows a logical progression from geological and physical processes, ecology, biology, and biogeography to exploitation, management, and conservation. **Natural Capital and Exploitation of the Deep Ocean** is aimed at marine biologists and ecologists, oceanographers, fisheries scientists and managers, fish biologists, environmental scientists, and conservation biologists. It will also be of relevance and use to a multi-disciplinary audience of fish and wildlife agencies, NGOs, and government departments involved in deep sea conservation and management.
