Waking Day:

Designing Preschool Interventions David W. Barnett, Susan H. Bell, Karen T. Carey, 2002-08-01 This practical text delineates the basic steps of developing effective interventions for learning and behavior difficulties in children aged two to five. The authors set forth an ecological framework that stresses identifying problem situations rather than classifying individual children as disabled or at risk. The core components of naturalistic intervention design are covered in depth including teacher and parent interviewing, classroom observation, and functional assessment team-based problem solving, strong accountability methods, and legal and ethical safeguards. Solidly grounded in empirical research, the book presents examples of successful interventions for fostering social competence and language skills and improving interactions with parents, teachers, and peers.

Dreams Robert J. Hoss, Katja Valli Ph.D., Robert P. Gongloff, 2019-01-11 This two-volume set examines dreams and dreaming from a variety of angles: biological, psychological, and sociocultural, in order to provide readers with a holistic introduction to this fascinating subject. Whether good or bad, and whether we remember them or not, each night every one of us dreams. But what biological or psychological function do dreams serve? What do these vivid images and strange storylines mean? How have psychologists, religions, and society at large interpreted dreams, and how can a closer examination of our dreams provide useful insights? *Dreams: Understanding Biology, Psychology, and Culture* presents a holistic view of dreams and the dreaming experience that answers these and many other questions. Divided thematically, this two-volume book examines the complex and often misunderstood subject of dreaming through a variety of lenses. This collection is written by a large and diverse team of experts and edited by leading members of the International Association for the Study of Dreams (IASD) but remains an approachable and accessible introduction to this captivating topic for all readers.

Integrated Evaluation of Disability Ramar Sabapathi Vinayagam, 2019-01-15 There are overwhelming demands for health and rehabilitation services due to a rise in the number of disabled people. The existing literature on disability evaluation has only focused on impairment or functional limitation or earning capacity. They have not considered the skills fundamental to live, learn, and work successfully in the community. This book addresses integrated evaluation of disability using Clinical Tools: Activity Participation Skills Assessment Scale, Personal Factors Measurement Scale, and Environmental Factors Measurement Scale. Physicians from all disciplines can use this method to evaluate disability pertaining to their respective fields. **Key Features:** Applies the principles of World Health Organization's International Classification of Functioning, Disability, and Health (ICF). Includes case studies in the hypothetical model in this book. Includes a Ready Reckoner Impairment Table providing impairment scores for 120 common clinical conditions. Consists of an integrated software which computes the percentage of disability for clinical conditions.
