## **Green Building Best:**

**The World's Greenest Buildings** Jerry Yudelson, 2013-01-17 The World's Greenest Buildings tackles an audacious task. Among the thousands of green buildings out there, which are the best and how do we know? Authors Jerry Yudelson and Ulf Meyer examined hundreds of the highest rated large green buildings from around the world and asked their owners to supply one simple thing: actual performance data to demonstrate their claims to sustainable operations. This pivotal book presents an overview of the rating systems and shows best-in-class building performance in North America, Europe, the Middle East, India, China, Australia, and the Asia Pacific region. Practical examples of best practices for greening both new and existing buildings, a practical reference for how green buildings actually perform at the highest level, one that takes you step-by-step through many different design solutions, a wealth of exemplary case studies of successful green building projects using actual performance data from which to learn, interviews with architects, engineers, building owners, and developers, and industry experts to provide added insight into the greening process. This guide uncovers some of the pitfalls that lie ahead for sustainable design and points the way toward much faster progress in the decade ahead.

**Positive Development** Janis Birkeland, 2012-05-16 Janis Birkeland presents the innovative new paradigm of Positive Development in which the built environment provides greater life quality, health, amenity, and safety for all without sacrificing resources or money. With a different form of design, development itself can become a sustainability solution. A cornerstone of this new paradigm is the eco-retrofitting of the vast urban fabric we already inhabit. The author presents a revolutionary new tool called SmartMode to achieve this end. This book challenges everyone working in or studying the areas of sustainable development, planning, architecture, or the built environment to rethink their current ideas and practices.

**Good Green Homes** Jennifer Roberts,2009-09 Green It conjures images of a meadow in spring for some and the color of money for others What does green have to do with our homes In essence green building or sustainable building means being smart about how we use energy water and building materials so that we can live well without needlessly damaging the environment Creating a good green home isn t just about conservation about using less or saving more although that s certainly part of it It s about

creating better homes that are easier on the environment less expensive over the long term and more delightful to come home to That s the message Jennifer Roberts wants to share in Good Green Homes the ultimate new guide for people who want to live in comfortable healthy environmentally conscious homes With some simple steps outlined in this book you can save money and do your part to help save the environment For instance using an energy efficient light bulb saves you money It also results in less demand for electricity which in turn results in less pollution from power plants which may help a child with asthma breathe a little easier If you associate green built housing with the unconventional or the quirky tree houses geodesic domes dwellings constructed of tires or soda bottles think again Perfect for homeowners remodelers renters who might be surprised by how much is within their power to change architects builders and interior designers this book lays out seven fundamental principles of green building illustrated with more than 150 color and 20 black and white photographs of more than twenty five homes Jennifer Roberts launched two retail stores in San Francisco specializing in environmentally sensible consumer products including household goods and is a freelance writer and editor on topics that include energy efficient building design and systems
