Membrane Protein-Cytoskeleton Interactions, 1996-11-21 The plasma membrane acts as both a boundary and a site of exchange between the outside and the inside of a cell The cytoskeleton plays essential roles in delineating membrane protein distributions in defining structural and functional domains in the plasma membrane and in regulating membrane protein and ultimately cell function This volume reviews the regulation of membrane protein

distribution organization and function at the plasma membrane by the cytoskeleton Discussions also include the roles of cytoskeleton in the structural and functional organization of membranes and membrane proteins with emphasis on key problems the current status of understanding experimental approaches and future directions

Mathematical Methods for Hydrodynamic Limits Anna DeMasi,Errico Presutti,1991 Entropy inequalities correlation functions couplings between stochastic processes are powerful techniques which have been extensively used to give arigorous foundation to the theory of complex many component systems and to its many applications in a variety of fields as physics biology population dynamics economics The purpose of the book is to make theseand other mathematical methods accessible to readers with a limited background in probability and physics by examining in detail a few models where the techniques emerge clearly while extra difficulties arekept to a minimum Lanford s method and its extension to the hierarchy of equations for the truncated correlation functions the v functions are presented and applied to prove the validity of macroscopic equations forstochastic particle systems which are perturbations of the independent and of the symmetric simple exclusion processes Entropy inequalities are discussed in the frame of the Guo Papanicolaou Varadhan technique and of theKipnis Olla Varadhan super exponential estimates with reference to zero range

models Discrete velocity Boltzmann equations reaction diffusion equations and non linear parabolic equations are considered as limits of particles models Phase separation phenomena are discussed in the context of Glauber Kawasaki evolutions and reaction diffusion equations Although the emphasis is on the mathematical aspects the physical motivations are explained through the analysis of the single models without attempting however to survey the entire subject of hydrodynamical limits
