Sleep Deprivation and Cognition Volume 247 the latest release in the Progress in Brain Research series covers the effects of sleep deprivation with this new release featuring sections on the Impact of sleep deprivation on long term memory Adolescent sleep restriction effects on cognition and mood Self regulation and social behavior during sleep deprivation Experiential decision making and the effects of sleep loss Sleep deprivation and dynamic attentional control a Pharmacogenetic approach to understanding sleep deprivation and cognition Neuroimaging of functional connectivity in the sleep deprived brain what does it tell us and more **Sleep and cognition in the elderly** Géraldine Rauchs, Julie Carrier, Philippe Peigneux, 2015-05-26 Understanding the role of sleep and the mechanisms at play in ageing are among the most exciting challenges in neuroscience Although our understanding of the mechanisms governing sleep stages and their role in cognitive processes including memory functions is gradually increasing most of the currently available data have been gathered in young adults Still substantial physiological changes in sleep are observed with increasing age that may markedly impacts on daily functioning This is why this Research Topic focuses on our current understanding of the impact of age related changes in sleep architecture on various domains of cognition The three editors Julie Carrier Montr al Canada Philippe Peigneux Brussels Belgium and G raldine Rauchs Caen France are specialized in various fields of sleep research Here they bring together an outstanding group of neuroscientist and clinical investigators engaged in the study of sleep encompassing state of the art studies of sleep disorders such as sleep apnoea or REM sleep behaviour disorder studies assessing new treatments to improve sleep quality together with experts in various domains of cognition such as vigilance memory and dreams in a perspective aimed at offering the interested reader a comprehensive view of the impact of age related changes in sleep architecture on cognition **Human Sleep and Cognition, Part II**, 2011-05-16 There is a critical bidirectional relationship between sleep and cognition yet the literature in this area is scattered and it is surprisingly difficult to find a comprehensive overview of the basic principles latest discoveries and outstanding challenges This issue of Progress in Brain Research is split over 2 volumes bringing together cutting edge research on the topic in the basic clinical and applied sciences The 2 volumes review current knowledge and understanding provide a starting point for researchers and practitioners entering the field and build a platform for further research and discovery Leading authors review the state of the art in their field of investigation and provide their views and perspectives for future research Chapters are extensively referenced to provide readers with a comprehensive list of resources on the topics covered All chapters include comprehensive background information and are written in a clear form that is also accessible to the non specialist *Sleep and Cognition* Richard R. Bootzin, John F. Kihlstrom, 1990-01-01 Despite impressive advances in understanding sleep as a biological phenomenon and in understanding the nature of mental processes in the normal waking state our knowledge of

mental life during sleep remains extremely impoverished The common identification of cognition with consciousness leaves the impression that little or no mental activity occurs during sleep The present volume represents the Proceedings of the Arizona Conference on Sleep and Cognition held in Tucson January 19 22 1989 A principal concern of the conference was the implications of recent work on implicit memory and other aspects of information processing outside of awareness for studies of cognitive processes during sleep and the role of the sleep laboratory as a vehicle for studying various aspects of information processing outside of awareness in the absence of the active deployment of attention To this end selected investigators in the area of sleep who have an interest in cognitive processes were brought together with their counterparts in the area of cognition who have an interest in sleep We hope that one outcome of this meeting and publication of the Proceedings will be a new agenda for research on sleep that will carry investigators of both camps well into the 21st century

web nov 17 2023 dissipation is a common occurrence in real world systems and is generally considered to be detrimental to transport in this study we examine the transport properties of a narrow quantum anomalous hall system with dissipation applied on one edge when the fermi level resides within the hybridization gap we find that while transport is
