

Help...I've Been Asked to Synthesize!

Writing a strong researched paper requires the ability to synthesize—or combine elements of several sources—to help you make a point. The purpose of the Multiple Source Essay is to give students the chance to practice this process of “synthesis”. In English 1120, synthesis is not magic, but is a tool for drawing together particular themes or traits that you observe in various texts and reorganizing the material according to themes or traits put forth by you and driven by your thesis.

If you are breathing, you are synthesizing. It's simply a matter of making connections or putting things together. We synthesize information naturally to help others see the connections between things. For example, when you report to a friend the things that several other friends have said about a song or movie, you are engaging in synthesis. However, synthesizing is much more than simply reporting. Synthesis is related to, but not the same as, classification, division, or comparison and contrast. Instead of merely attending to different categories and trying to find some sort of similarity or difference, synthesizing is a matter of pulling various sources together into some kind of harmony. It is the ability to combine clearly and coherently the ideas of more than one source with your own. For example, you have probably already, early in your college years, stored up a mental databank of the various things you have heard about particular professors. If your databank contains several negative comments, you might synthesize that information and use it to help you decide not to take a class from a particular instructor.

Although at its most basic level a synthesis involves combining two or more theses/ideas, synthesis writing is more difficult than it might first appear because this combining must be done in a meaningful way, and the final product must be thesis driven.

So you might be asking yourself, “What the heck am I supposed to do?” The key to writing any researched essay is to read well, to understand the main idea and developmental structure of the source articles, and to identify the points of contact between the various sources and your own argument. This means seeing how they agree, disagree, reinforce, subvert, explain and contradict one another in the context of your thesis. So, in a nutshell, synthesizing finds and explicates links between materials for the purpose of constructing a new thesis (syn-thesis) or theory.

There are several things students should keep in mind while beginning to attempt writing essays that use synthesis.

Here are a few things it is usually best to AVOID:

1. AVOID constructing the body of your paper out of a series of summaries.

This is the most common error that writers fall into when first attempting this kind of essay. Since you already know how to write summaries (Remember the Critique?), it is easy to think that a synthesis is just a summary of different sources. It's not; writing a true synthesis is a different, more demanding, and more sophisticated task. Why? Because a mere collection of summaries, while much easier to produce, has one very serious shortcoming. Keep in mind that written sources dealing with the same topic typically include many of the same facts and arguments (usually just phrased differently). So, if you just summarize each source

Synthesis With Style:

The Genius of Style William Crary Brownell, 1924 **IT Convergence and Security 2017** Kuinam J. Kim, Hyuncheol Kim, Nakhoon Baek, 2017-08-28 This is the first volume of proceedings including selected papers from the International Conference on IT Convergence and Security ICITCS 2017 presenting a snapshot of the latest issues encountered in this field. It explores how IT convergence and security issues are core to most current research and industrial and commercial activities. It consists of contributions covering topics such as machine learning, deep learning, communication and signal processing, computer vision and applications, future network technology, artificial intelligence and robotics. ICITCS 2017 is the latest in a series of highly successful International Conferences on IT Convergence and Security previously held in Prague, Czech Republic 2016, Kuala Lumpur, Malaysia 2015, Beijing, China 2014, Macau, China 2013, Pyeong Chang, Korea 2012 and Suwon, Korea 2011.

Applications of VHDL to Circuit Design Randolph E. Harr, Alec G. Stanculescu, 1991-06-30 Describing and designing complex electronic systems has become an overwhelming activity for which VHDL is showing increasingly useful and promising support. Although created as a description language, VHDL is being increasingly used as a simulatable and synthesizable design language. For the first time here is a book which describes a number of unique and powerful ways VHDL can be used to solve typical design problems in systems ones which must be designed correctly in very short periods of time. Typically useful techniques such as switch level modeling, mixed analog and digital modelling and advanced synthesis for which VHDL shows great promise are fully presented. These methods are both immediately applicable and indicate the potential of VHDL in efficiently modelling the real world of electronic systems. Since its inception there has been a desire for an analog description language consistent with and integrated with VHDL. Until recently VHDL could only be applied to digital circuits. The dream of describing and simulating mixed analog and digital circuits is now a reality as described herein. Describing the functionality of analog circuits including interoperability with digital circuits using the VHDL paradigm is surprisingly easy and powerful. The approach outlined by the authors presages a significant advance in the simulation of mixed systems.

Artificial Intelligence for Art Creation and Understanding Luntian Mou, 2024-08-29 AI Generated Content (AIGC) is a revolutionary engine for digital content generation. In the area of art, AI has achieved remarkable advancements. AI is capable of not only creating paintings or music comparable to human masterpieces but it also understands and appreciates artwork. For professionals and amateurs, AI is an enabling tool and an opportunity to enjoy a new world of art. This book aims to present the state of the art AI technologies for art creation, understanding and evaluation. The contents include a survey on cross-modal generation of visual and auditory content, explainable AI and music AI enabled robotic theater for Chinese folk art, AI for ancient Chinese music restoration and reproduction, AI for brainwave opera, artistic text style transfer, data-driven automatic choreography, Human-AI collaborative sketching, personalized music recommendation and generation based on emotion and memory, MemoMusic understanding music and emotion from the
