significant progress in the field of automatic control This book presents the leading areas of application of some of the more
advanced control techniques in the field of aerospace vehicles Organized into six chapters this volume begins with an
overview of several topics including space vehicle orbit determination space vehicle rendezvous guidance and control
methods and reentry vehicle guidance and control This text then examines the solution of the reference control input or
trajectory problem by the quasilinearization or generalized Newton Raphson operator technique Other chapters consider the
basic problem of existence of optimal control and discuss the application of Kalman filtering techniques to nonlinear system
problems This book discusses as well the role of existence theorems in optimal control The final chapter deals with the
application areas of state space techniques This book is a valuable resource for aerospace engineers *Optimal Design of
