Transactions of the Society for Computer Simulation ,1984 *Performance Evaluation of Supercomputers* Joanne L. Martin,1988 Although supercomputer systems are faster and have larger memory hierarchies than other computer systems such characteristics merely imply the existence of great potential power How much of that power can be harnessed productively is the central theme of performance evaluation A set of methods for evaluating the performance of applications on supercomputers has not yet been rigorously defined This volume is a compilation of research approaches and techniques that are a promising means to that end The contributions are grouped into three sections Contributors to Performance looks at applications algorithms compilers operating systems and memory issues Measurements and Metrics addresses some of the current techniques and methods of performance evaluation Among the topics are the performance monitoring capabilities of the CEDAR system the methodology behind the Livermore loops the empirical analysis of system performance and a software simulator developed in connection with the RP3 project Methods Models and Directions looks at ways of establishing a general and theoretical framework for supercomputer performance evaluation
