## Systems Of Logic:

Systems of Logic Norman M. Martin, 1989-07-28 This advanced study of systems of propositional logic offers a comprehensive account of a wide variety of logical systems and encourages students to take a critical stance toward the subject A great variety of systems and subsystems are defined and compared as regards their deductive power and relation to their model theory Special attention is given to the weakenings of classical logic and a more refined treatment of modal logic is presented

Systems of Formal Logic L.H. Hackstaff, 1966-07-31 The present work constitutes an effort to approach the subject of symbolic logic at the elementary to intermediate level in a novel way The book is a study of a number of systems their methods their relations their differences In pursuit of this goal a chapter explaining basic concepts of modern logic together with the truth table techniques of definition and proof is first set out In Chapter 2 a kind of *ur* logic is built up and deductions are made on the basis of its axioms and rules This axiom system resembling a propositional system of Hilbert and Bernays is called P since it is a positive logic i.e. a logic devoid of negation This system serves as a basis upon which a variety of further systems are constructed including among others a full classical propositional calculus an intuitionistic system a minimum propositional calculus a system equivalent to that of F B Fitch Chapters 3 and 6 These are developed as axiomatic systems By means of adding independent axioms to the basic system P the notions of independence both for primitive functors and for axiom sets are discussed the axiom sets for a number of such systems e.g. Frege's propositional calculus being shown to be non independent Equivalence and non equivalence of systems are discussed in the same context The deduction theorem is proved in Chapter 3 for all the axiomatic propositional calculi in the book

*Leśniewski's Systems of Logic and Foundations of Mathematics* Rafal Urbaniak, 2013-09-24 This meticulous critical assessment of the ground breaking work of philosopher Stanislaw Leśniewski focuses exclusively on primary texts and explores the full range of output by one of the master logicians of the Lvov Warsaw school The author's nuanced survey eschews secondary commentary analyzing Leśniewski's core philosophical views and evaluating the formulations that were to have such a profound influence on the evolution of mathematical logic One of the undisputed leaders of the cohort of brilliant logicians that congregated in Poland in the early twentieth century Leśniewski was a guide and mentor to a generation of celebrated analytical philosophers Alfred Tarski was his PhD student His primary achievement was a system of foundational mathematical logic intended as an alternative to the Principia Mathematica of Alfred North Whitehead and Bertrand Russell Its three strands protothetic ontology and mereology are detailed in discrete sections of this volume alongside a wealth of other chapters grouped to provide the fullest possible coverage of Leśniewski's academic output With material on his early philosophical views his contributions to set theory and his work on nominalism and higher order quantification this book offers a uniquely expansive critical commentary on one of analytical philosophy's great pioneers
