Thinking Mathematically Thomas P. Carpenter,Megan Loef Franke,Linda Levi,2003 Looks at how children build on their emerging knowledge of arithmetic to provide a foundation for learning algebra and describes a number of types of problems and forms of questioning for eliciting children s thinking and for fostering growth in mathematical understanding Bridging the Gap Between Arithmetic & Algebra Bradley S. Witzel,2015-11-15 Although two federal panels have concluded that all students can learn mathematics and most can succeed through Algebra 2 the abstractness of algebra and missing precursor understandings may be overwhelming to many students and their teachers Bridging the Gap Between Arithmetic Algebra responds to this need for instruction and interventions that go beyond typical math lesson plans Providing a review of evidence based practices the book is an essential reference for mathematics teachers and special education teachers when teaching mathematics to students who struggle with the critical concepts and skills necessary for success in algebra Audiences General education mathematics teachers special education teachers administrators teacher educators

Encountering Algebra Cecilia Kilhamn,Roger Säljö,2019-07-03 The book reports a comparative research project about algebra teaching and learning in four countries Algebra is a central topic of

learning across the world and it is well known that it represents a hurdle for many students. The book presents analyses built on extensive video recordings of classrooms documenting the first introduction to symbolic algebra students aged 12 to 14. While the content addressed in all classrooms is variables, expressions, and equations, the teaching approaches are diverse. The chapters bring the reader into different algebra classrooms, discussing issues such as mathematization and social norms, the role of mediating tools, and designed examples and teacher beliefs. By comparing classrooms, new insights are generated about how students understand the algebraic content, how teachers instruct, and how both parties deal with difficulties in learning elementary algebra. The book also describes a research methodology using video in search of taken-for-granted aspects of algebra lessons.

Teaching and Learning Algebra 1 Via an Intelligent Tutor System Karen Kerner Lucas, 2012. This study investigated the implementation and outcomes of blended learning that integrated Apagea Math, an online intelligent tutor system (ITS) with face-to-face instruction for the teaching and learning of Algebra 1. It took place in a Title I urban high school where 75 ninth-grade students and their teachers enacted the blended learning program for one semester. Students from the same high school who received face-to-face instruction alone during a previous semester served as a comparison group. Flow theory was proposed as an explanation for why the ITS program was expected to increase student engagement and improve student achievement. This quasi-experimental, mixed-methods study collected data via student assessments, surveys, observation forms, questionnaires, and meeting notes. Fidelity of implementation was rated based on four components: adherence, exposure, quality of delivery, and participant responsiveness. Challenges encountered and practices used when implementing the program were characterized as first-order external or second-order internal and were analyzed to reveal themes. A mixed ANOVA conducted on assessment data revealed a significant interaction effect between time (pre or post) and group (intervention or comparison) on achievement. *F* (1, 157) = 5.25, *p* < .05.

Teaching Elementary Mathematics to Struggling Learners Bradley S. Witzel, Mary E. Little, 2016-01-25. Packed with effective instructional strategies, this book explores why certain K-5 students struggle with math and provides a framework for helping these learners succeed. The authors present empirically validated practices for supporting students with disabilities and others experiencing difficulties in specific areas of math, including problem solving, early numeracy, whole number operations, fractions, geometry, and algebra. Concrete examples, easy-to-implement lesson planning ideas, and connections to state standards, in particular the Common Core standards, enhance the book's utility. Also provided is invaluable guidance on planning and delivering multi-tiered instruction and intervention.

the algebraic understanding and nurtures the ways of thinking in the form of algebraic reasoning simultaneously The content presentation is designed in a self instructional and self paced child centered modular approach to enhance algebraic understanding among the learners The handbook will provide flexibility and conceptual strength to the teachers to extend the elaborations of algebraic concepts with more effective and dynamic ways of teaching algebra In a nutshell the handbook provides an algebraic eye to the teacher and learner to look deeper into the problems of algebra and its different ways of solution

Teaching Early Algebra through Example-Based Problem Solving Meixia Ding, 2021-04-07 Drawing on rich classroom observations of educators teaching in China and the U S this book details an innovative and effective approach to teaching algebra at the elementary level namely teaching through example based problem solving TEPS Recognizing young children s particular cognitive and developmental capabilities this book powerfully argues for the importance of infusing algebraic thinking into early grade mathematics teaching and illustrates how this has been achieved by teachers in U S and Chinese contexts Documenting best practice and students responses to example based instruction the text demonstrates that this TEPS approach which involves the use of worked examples representations and deep questions helps students learn and master fundamental mathematical ideas making it highly effective in developing algebraic readiness and mathematical understanding This text will benefit post graduate students researchers and academics in the fields of mathematics STEM and elementary education as well as algebra research more broadly Those interested in teacher education classroom practice and developmental and cognitive psychology will also find this volume of interest

Early Algebra Carolyn Kieran, Jeong Suk Pang, Deborah Schifter, Swee Fong Ng, 2016-07-11 This survey of the state of the art on research in early algebra traces the evolution of a relatively new field of research and teaching practice With its focus on the younger student aged from about 6 years up to 12 years this volume reveals the nature of the research that has been carried out in early algebra and how it has shaped the growth of the field The survey in presenting examples drawn from the steadily growing research base highlights both the nature of algebraic thinking and the ways in which this thinking is being developed in the primary and early middle school student Mathematical relations patterns and arithmetical structures lie at the heart of early algebraic activity with processes such as noticing conjecturing generalizing representing justifying and communicating being central to students engagement
