Chris Gregg, 2021-01-15 *Your First Year Teaching Computer Science* is a comprehensive guide to teaching computer science geared to new instructors in the field. It can be used as a guide and a reference and it provides multiple examples of how to construct teaching materials, how to prepare lectures, how to write assignments, how to train TAs, and how to advise students among many other topics. It is both motivational and instructive and it provides a foundation on which to become a great CS instructor. Teaching computer science involves more than just teaching the material, and this book details all of the other parts of teaching that you will need to know to do the job. If you are wondering where to begin as a computer science teacher, this is the book for you.

Features:

- Serves as a comprehensive guide to teaching introductory computer science for new teachers and experienced teachers can refer to it on specific points.
- Provides examples of teaching materials, grading guides, multiple lists, and other valuable resources for helping new teachers to launch their first computer science courses.
- Includes information about training TAs, holding office hours, advising students, and many other practical information that is not specifically about the technical part of teaching computer science.
- Written in a conversational tone and is premised on the belief that teaching should be rewarding, fun, and engaging.

*Computer Science Education* Sue Sentance, Erik Barendsen, Nicol R. Howard, Carsten Schulte, 2023-02-23. Drawing together the most up to date research from experts all across the world, the second edition of *Computer Science Education* offers the most up to date coverage available on this developing subject. Ideal for building confidence of new pre-service and in-service educators teaching a new discipline, it provides an international overview of key concepts, pedagogical approaches, and assessment practices. Highlights of the second edition include:

- New sections on machine learning and data-driven epistemic programming.
- A new focus on equity and inclusion in computer science education.
- Chapters updated throughout, including a revised chapter on relating ethical and societal aspects to knowledge-rich aspects of computer science education.
- A new set of chapters on the learning of programming, including design pedagogy and misconceptions.
- A chapter on the way we use language in the computer science classroom.

The book is structured to support the reader with chapter outlines, synopses, and key points. Explanations of key concepts, real-life examples, and reflective points keep the theory grounded in classroom practice. The book is accompanied by a companion website including online summaries for each chapter, 3-minute video summaries by each author, and an archived chapter on taxonomies and competencies from the first edition.

[How Do K-8 Teachers Conceptualize and Practice Teaching Computer Science?](#) Meize Guo, 2022. The consistent prevalence of computer science in our society and the urgent need for STEM professionals in the U.S. raised the need for computer science education at the K-8 level. Researchers have examined the challenges, possible approaches, and contents of teaching computer science. However, there has been limited research on teachers' conceptualization and practice of teaching computer science in their classes at the K-8 level. This study aimed to examine K-8 teachers' conceptions and practices of teaching computer science in Indiana. To this end, the research question focused on how K-8 teachers conceptualize computer science and how K-8 teachers practice teaching computer

science This study utilized an explanatory sequential mixed method embedded with a multiple case design to answer the research questions From kindergarten to eighth grade nine teachers who had computer science teaching experience participated in this study The data collected from the participants included questionnaires semi structured interviews class observation and teaching materials Thematic analysis procedure and constant comparative analysis procedure were employed as the data analysis approaches The results showed that the participants of this study used computers and technology indistinguishably In addition the participants viewed computer literacy and digital citizenship as the essential parts of computer science However the participants teaching practice emphasized coding and computer literacy more than digital citizenship which was not alien to their concepts of computer science The participants of this study have taught computer science as separate activities as opposed to a sustained curriculum Moreover the participants of this study relied on free and ready to use teaching materials especially those that included hands on activities The participants of this study agreed that computer science should be a separate class and taught by specialists even though they all have plenty of computer science teaching experience and have valued integrating computer science with other subject areas Furthermore the participants of this study integrated computer science with other subject areas without being aware The participants of this study discussed the influential factors that impact computer science teaching 1 computer science curriculum resources 2 time to learn computer science 3 priority of computer science in teaching and 4 professional development on computer science It is recommended that clarification on what computer science is and how to teach the computer science concepts need to be delivered to K 8 teachers More accessible and ready to use computer science curricula are needed especially the curricula that include hands on computer science activities and integrate computer science with other subject areas Based on the results of this study I suggest facilitating K 8 teachers computer science teaching by enhancing teachers computer science knowledge and competence and integrating computer science with other subject areas More longitudinal studies capturing teachers conceptions and practices of teaching computer science will need to be conducted in the future
