## **Teaching Mathematics In Multilingual Classrooms:**

**Teaching and Learning Mathematics in Multilingual Classrooms** Anjum Halai, Philip Clarkson, 2015-12-17

Contemporary concerns in mathematics education recognize that in the increasingly technological and globalized world with concomitant change in population demographics e.g. immigration, urbanization and a change in the status of languages e.g. English as a dominant language of science and technology, multilingualism in classrooms is a norm rather than an exception. Shifts in perspective also view language not simply as an instrument for cognition with all learners equipped with this instrument in service of learning, although clearly in the classroom that remains of importance. Rather, it is now also being acknowledged that language use is inherently political, so that the language that gets official recognition in the classroom is invariably the language of the powerful elite or the dominant societal language or, in the case of post-colonial contexts, the language of the colonisers. From this socio-political role of language in learning, quite different issues arise for teaching, learning and curriculum for linguistically marginalized learners than that of cognition e.g. immigrants, second language learners, etc. Policies on language in education are being considered and re-considered with specific reference to mathematics teaching and learning. Given the policy environment globally, the proposed publication is timely. This edited collection draws on recent emerging insights and understandings about the approaches to improving policy and practice in mathematics education and mathematics teacher education in multilingual settings. It presents and discusses critically examples of work from a range of contexts and uses these examples to draw out key issues for research in education in language diverse settings, including teaching, learning, curriculum and fit, these with appropriate policy and equity approaches. With contributions from all over the world, especially novice researchers in low income countries, this book is a valuable resource for courses in Mathematics Education and related social sciences, both at the graduate and undergraduate levels, as well as for students of international development.

### **Teaching Mathematics in Multilingual Classrooms** J.B.

Adler, 2001-06-30 The author captures three inter-related dilemmas that lie at the heart of teaching mathematics in multilingual classrooms: code-switching, mediation and transparency. She provides a sharp analysis and strong theoretical grounding, pulling together research related to the relationship between language and mathematics, communicating mathematics and mathematics in bi-multilingual settings, and offers a direct challenge to dominant research on communication in mathematics classrooms.

### **Multilingualism in Mathematics Classrooms** Richard Barwell, 2009

Learning and teaching mathematics in multilingual, bilingual or second language settings can be challenging. This collection explores the complex issues that arise in multilingual mathematics classrooms in Europe, South Asia, North America and Australia. Each contribution draws on recent research to offer new insights into the relationship between language learning and mathematics.
