Leonard Barolli,Aneta Poniszewska-Maranda,Hyunhee Park,2020-06-09 This book presents the latest research findings methods and development techniques challenges and solutions concerning UPC from both theoretical and practical perspectives with an emphasis on innovative mobile and Internet services With the proliferation of wireless technologies and electronic devices there is a rapidly growing interest in Ubiquitous and Pervasive Computing UPC which makes it possible to create a human oriented computing environment in which computer chips are embedded in everyday objects and interact with the physical world Through UPC people can go online even while moving around thus enjoying nearly permanent access to their preferred services Though it has the potential to revolutionize our lives UPC also poses a number of new research challenges Constitution and Production of Mathematics in the Cyberspace Maria Aparecida Viggiani Bicudo,2020-04-29

This book brings together various studies that assume phenomenology to analyze how mathematics education is affected by the experience of being in the cyberspace The authors of the chapters included in this contributed volume work with the theoretical framework developed by authors such as Edmund Husserl Martin Heidegger and Maurice Merleau Ponty to investigate how mathematics is produced and comprehended in a new way of being in the world with digital technologies The aim of this book is not to explain the tools used and how one works with them in the cyberspace aiming at better teaching and learning mathematics Its purpose is to present philosophical investigations that contribute to the understanding of the complexity of the world in which we are being researchers and mathematics teachers By doing so *Constitution and Production of Mathematics in the Cyberspace A Phenomenological Approach* will help researchers and mathematics teachers understand their role in a world in which the experience of teaching and learning mathematics is being radically changed by new technologies and new ways of being in this world **From beliefs to dynamic affect systems in mathematics**

education Birgit Pepin,Bettina Roesken-Winter,2014-10-21 This book connects seminal work in affect research and moves

forward to provide a developing perspective on affect as the decisive variable of the mathematics classroom. In particular, the book contributes and investigates new conceptual frameworks and new methodological tools in affect research and introduces the new field of collectives to explore affect systems in diverse settings. Investigated by internationally renowned scholars, the book is built up in three dimensions. The first part of the book provides an overview of selected theoretical frames, theoretical lenses to study the mosaic of relationships and interactions in the field of affect. In the second part, the theory is enriched by empirical research studies and provides relevant findings in terms of developing deeper understandings of individuals and collectives affective systems in mathematics education. Here, pupil and teacher beliefs and affect systems are examined more closely. The final part investigates the methodological tools used and needed in affect research. How can the different methodological designs contribute data which help us to develop better understandings of teachers and pupils affect systems for teaching and learning mathematics and in which ways are knowledge and affect related?
