## **The War On Pollution:**

China's War on Pollution Michael Greenstone, Guojun He, Shanjun Li, Eric Zou, 2021 The decade from 2010 to 2019 marked a significant turning point in China's history of environmental regulation and pollution. This article describes the recent trends in air and water quality with a focus on the five years since China declared a war on pollution in 2014. It summarizes the emerging literature that has taken advantage of accompanying improvements in data availability and accuracy to document sharp improvements in environmental quality, especially local air pollution, and understand their social, economic, and health consequences.

*Clearing the Air* Indur M. Goklany, 1999-11-01 America's air quality is better today than ever before in modern history and continues to steadily improve. How did this remarkable turnaround come about? Basing his conclusions on a painstaking compilation of long-term empirical data on air quality and emissions data extending from the pre-federalization era to the present, some dating back a century, Goklany challenges the orthodoxy that credits federal regulation for improving air quality. He shows that the air had been getting cleaner prior to and probably would have continued to improve regardless of federalization. States and localities after all have always been engaged in a race to improve the quality of life, which means different things at different stages of economic development. Goklany's empirical data refute once and for all the race to the bottom rationale for centralized federal regulation. Moreover, technological advances and consumer preferences continue to play important roles in improving air quality. Goklany accordingly offers a regulatory reform agenda that would improve upon the economic efficiency and environmental sensitivity of air quality regulation.

*Struggling for Air* Richard Revesz, Jack Lienke, 2015-12-08 Since the beginning of the Obama Administration, conservative politicians have railed against the President's War on Coal. As evidence of this supposed siege, they point to a series of rules issued by the Environmental Protection Agency that aim to slash air pollution from the nation's power sector. Because coal produces far more pollution than any other major energy source, these rules are expected to further reduce its already shrinking share of the electricity market in favor of cleaner options like natural gas and solar power. But the EPA's policies are hardly the unprecedented regulatory assault that opponents make them out to be. Instead, they are merely the latest chapter in a multi-decade struggle to overcome a tragic flaw in our nation's most important environmental law. In 1970, Congress passed the Clean Air Act, which had the remarkably ambitious goal of eliminating essentially all air pollution that posed a threat to public health or welfare. But there was a problem: for some of the most common pollutants, Congress empowered the EPA to set emission limits only for newly constructed industrial facilities, most notably power plants. Existing plants, by contrast, would be largely exempt from direct federal regulation, a regulatory practice known as grandfathering. What lawmakers didn't anticipate was that imposing costly requirements on new plants while giving existing ones a pass would simply encourage those old plants to stay in business much longer than originally planned. Since 1970, the core problems of U.S. environmental policy have flowed inexorably from the smokestacks of these coal-fired clunkers, which

continue to pollute at far higher rates than their younger peers In *Struggling for Air* Richard L Revesz and Jack Lienke chronicle the political compromises that gave rise to grandfathering its deadly consequences and the repeated attempts by presidential administrations of both parties to make things right [Annual Reports of the War Department](#) United States.
