Godwell Nhamo, Vuyo Mjimba, 2019-12-19 *The Green Building Evolution* illuminates global examples and makes use of case studies mainly from South Africa. This book is in five parts. Part I is a single introductory chapter centred on the evolution of the green building movement. Part II addresses the green building terrain. Part III presents selected case studies. Part IV focuses on chapters that address pushing the boundaries in the green building space while Part V presents emerging trends and policy perspectives. Further details are contained in the main body of the book. It is our sincere hope that readers will experience the book as an informative and ground breaking adventure. Written by 14 authors from different academic disciplines and areas of specialisation, the book comes as the sixth in a series that addresses global and national concerns on climate change, sustainable development and the green economy transition agenda. The book series is conceptualised and coordinated by the Exxaro Chair in Business and Climate Change led by Prof Godwell Nhamo and hosted by the Institute for Corporate Citizenship ICC at the University of South Africa (UNISA). The books are published by the Human Sciences Research Council (HSRC) through the Africa Institute of South Africa.

Green Building Management and Smart Automation

Solanki, Arun, Nayyar, Anand, 2019-07-05 Throughout the world there is an increasing demand on diminishing natural resources in the industrial, transport, commercial and residential sectors. Of these, the residential sector uses the most energy on such needs as lighting, water heating, air conditioning, space heating and refrigeration. This sector alone consumes one third of the total primary energy resources available. By using green building and smart automation techniques, this demand for energy resources can be lowered. *Green Building Management and Smart Automation* is an essential scholarly publication that provides an in-depth analysis of design technologies for green building and highlights the smart automation technologies that help in energy conservation along with various performance metrics that are necessary to facilitate a building to be known as a Green Smart Building. Featuring a range of topics such as environmental quality, energy management and big data analytics, this book is ideal for researchers, engineers, policymakers, government officials, architects and students.

The Decarbonization Imperative Michael Lenox, Rebecca Duff, 2021-10-19 Time is of the essence. Climate change looms as a malignant force that will reshape our economy and society for generations to come. If we are going to avoid the worst effects of climate change, we are going to need to effectively decarbonize the global economy by 2050. This doesn't mean a modest or even a drastic improvement in fuel efficiency standards for automobiles. It means 100 percent of the cars on the road being battery powered or powered by some other non-carbon emitting powertrain. It means 100 percent of our global electricity needs being met by renewables and other non-carbon emitting sources such as nuclear power. It means electrifying the global industrial sector and replacing carbon-intensive chemical processes with green alternatives, eliminating scope one emissions in production across all industries, particularly steel, cement, petrochemicals, which are the backbone of the global economy. It means sustainable farming while still feeding a growing global population. Responding to the existential threat of climate change, Michael Lenox and Rebecca Duff propose a radical reconfiguration of the industries contributing the most

and most harmfully to this planetary crisis Disruptive innovation and a particular calibration of industry dynamics will be key to this change The authors analyze precisely what this might look like for specific sectors of the world economy ranging from agriculture to industrials and building energy and transportation and examine the possible challenges and obstacles to introducing a paradigm shift in each one With regards to existent business practices and products how much and what kind of transformation can be achieved The authors assert that markets are critical to achieving the needed change and that they operate within a larger scale of institutional rules and norms Lenox and Duff conclude with an analysis of policy interventions and strategies that could move us toward clean tech and decarbonization by 2050
