## **Systems Of Life:**

**The Web of Life** Fritjof Capra, 1997-09-15 The vitality and accessibility of Fritjof Capra's ideas have made him perhaps the most eloquent spokesperson of the latest findings emerging at the frontiers of scientific social and philosophical thought. In his international bestsellers *The Tao of Physics* and *The Turning Point* he juxtaposed physics and mysticism to define a new vision of reality. In *The Web of Life* Capra takes yet another giant step setting forth a new scientific language to describe interrelationships and interdependence of psychological biological physical social and cultural phenomena the web of life. During the past twenty five years scientists have challenged conventional views of evolution and the organization of living systems and have developed new theories with revolutionary philosophical and social implications. Fritjof Capra has been at the forefront of this revolution. In *The Web of Life* Capra offers a brilliant synthesis of such recent scientific breakthroughs as the theory of complexity Gaia theory chaos theory and other explanations of the properties of organisms social systems and ecosystems. Capra's surprising findings stand in stark contrast to accepted paradigms of mechanism and Darwinism and provide an extraordinary new foundation for ecological policies that will allow us to build and sustain communities without diminishing the opportunities for future generations. Now available in paperback for the first time *The Web of Life* is cutting edge science writing in the tradition of James Gleick's *Chaos* Gregory Bateson's *Mind and Matter* and Ilya Prigogine's *Order Out of Chaos*.

**The Systems View of Life** Fritjof Capra, Pier Luigi Luisi, 2014-04-10 Over the past thirty years a new systemic conception of life has emerged at the forefront of science. New emphasis has been given to complexity networks and patterns of organisation leading to a novel kind of systemic thinking. This volume integrates the ideas models and theories underlying the systems view of life into a single coherent framework. Taking a broad sweep through history and across scientific disciplines the authors examine the appearance of key concepts such as autopoiesis dissipative structures social networks and a systemic understanding of evolution. The implications of the systems view of life for health care management and our global ecological and economic crises are also discussed. Written primarily for undergraduates it is also essential reading for graduate students and researchers interested in understanding the new systemic conception of life and its implications for a broad range of professions from economics and politics to medicine psychology and law.
