Teaching and Learning STEM Richard M. Felder, Rebecca Brent, 2016-02-22 Rethink traditional teaching methods to improve student learning and retention in STEM Educational research has repeatedly shown that compared to traditional teacher centered instruction certain learner centered methods lead to improved learning outcomes greater development of critical high level skills and increased retention in science technology engineering and mathematics STEM disciplines Teaching and Learning STEM presents a trove of practical research based strategies for designing and teaching STEM courses at the university community college and high school levels The book draws on the authors extensive backgrounds and decades of experience in STEM education and faculty development Its engaging and well illustrated descriptions will equip you to implement the strategies in your courses and to deal effectively with problems including student resistance that might occur in the implementation The book will help you Plan and conduct class sessions in which students are actively engaged no matter how large the class is Make good use of technology in face to face online and hybrid courses and flipped classrooms Assess how well students are acquiring the knowledge skills and conceptual understanding the course is designed to teach Help students develop expert problem solving skills and skills in communication creative thinking critical thinking high performance teamwork and self directed learning Meet the learning needs of STEM students with a broad diversity of attributes and backgrounds The strategies presented in Teaching and Learning STEM don t require revolutionary time intensive changes in your teaching but rather a gradual integration of traditional and new methods The result will be continual improvement in your teaching and your students learning More information about Teaching and Learning STEM can be found at <http://educationdesignsinc.com> book including its preface foreword table of contents first chapter a reading guide and reviews in 10 prominent STEM education journals

[A Learner-Centered Approach for Training Science Teachers Through Virtual Reality and 3D](#)

Visualization Technologies Yau-Yuen Yeung, 2004 This paper presentation will report on how some science educators at the Science Department of The Hong Kong Institute of Education have successfully employed an array of innovative learning media such as three dimensional 3D and virtual reality VR technologies to create seven sets of resource kits most of which are being placed on the Internet website address <http://www.ied.edu.hk> has used [3dvr.htm](http://www.ied.edu.hk/3dvr.htm) to provide a wide variety of self learning materials to support the effective training of science teachers Since a decade ago it has been perceived that virtual reality would re shape our socio cultural life in the 21st century because it has a wide diversity of impressive and practical applications such as 3D medical imaging product and architectural design visualization of complex scientific data molecular crystal modeling games entertainment training and education With the rapid advancement in 3D and computer technologies VR has become much more user friendly and affordable in prices and so within a few years it will likely be incorporated as a part of the IT in education movement as advocated by many national local governments in their educational reform agenda Furthermore it is quite feasible to develop various kinds of teaching and learning resources in Science using certain kinds of lightweight relatively simple and inexpensive VR and 3D visualization technologies Based on our professional experience in teaching various science topics we have uncovered and identified many topics which are well known to cause obstacles difficulties to the students and in particular the physics subject but they can be taught and learned more effectively with the aid of 3D visualization and or virtual reality Yeung 2002 Examples of those 3D VR learning objects or courseware that we have developed Wang Yeung 2001 specifically for training science teachers include A Problem on Uniform Motion and Acceleration Basic Optics in 3D Virtual Reality Crystal Lattices The Earth and the Moon around the Sun and Human Skull and interactive 3D molecules of some common chemical or biological substances Those 3D and VR resources could be used for the learning and teaching of mechanics optics materials science astronomy molecular biology and chemistry etc It is widely believed Youngblut 1998 that they are capable of enhancing student centered or self organized learning because of various unique features and educational values as embedded in using 3D and VR media for learning Furthermore those self learning resources can help students develop their ability to visualize understand and mentally construct the details of complex scientific data and models which will otherwise be lost distorted or easily misinterpreted in planar 2D projection or monoscopic images A questionnaire survey had been administered to 361 student teachers to collect information about their prior knowledge attitude and evaluation of these innovative learning technologies The preliminary survey findings which provide empirical evidences for supporting our learner centered approach will be presented and discussed in this paper together with some educational values and implications for the learning and teaching of certain science topics in the school environment

Handbook of Molecular Technologies in Crop Disease Management P. Vidhyasekaran, 2007-02-20 The most effective economic and environmentally sound approach of managing crop disease in today s world is by breeding crops resistant to disease The Handbook of Molecular Technologies in Crop Disease Management provides a top to bottom detailed

view of crops from their molecular level to ways to manipulate a higher resistance to disease through breeding This comprehensive single source reference text covers the entire field of molecular breeding transgenic technology molecular plant pathology and molecular disease diagnostics presenting it all in clear understandable language The book contains an extensive bibliography and provides several tables and figures to clearly reinforce crucial points *Learner-Centered Teaching* Terry Doyle,2023-07-03 This book presents the research based case that Learner Centered Teaching LCT offers the best means to optimize student learning in college and offers examples and ideas for putting it into practice as well the underlying rationale It also starts from the premise that many faculty are much closer to being learner centered teachers than they think but don t have the full conceptual understanding of the process to achieve its full impact There is sometimes a gap between what we would like to achieve in our teaching and the knowledge and strategies needed to make it happen LCT keeps all of the good features of a teacher centered approach and applies them in ways that are in better harmony with how our brains learn It for instance embraces the teacher as expert as well as the appropriate use of lecture while also offering new effective ways to replace practices that don t optimizing student learning Neuroscience biology and cognitive science research have made it clear that it is the one who does the work who does the learning Many faculty do too much of the work for their students which results in diminished student learning To enable faculty to navigate this shift Terry Doyle presents an LCT based approach to course design that draws on current brain research on cognition and learning on addressing the affective concerns of students on proven approaches to improve student s comprehension and recall on transitioning from teller of knowledge to a facilitator of learning on the design of authentic assessment strategies such as engaging students in learning experiences that model the real world work they will be asked to do when they graduate and on successful communication techniques The presentation is informed by the questions and concerns raised by faculty from over sixty colleges with whom Terry Doyle has worked and on the response from an equal number of regional national and international conferences at which he has presented on topics related to LCT **The Impact of Science Methods**
