**Understanding and Teaching the Intuitive Mind** Bruce Torff,Robert J. Sternberg,2001-01-01 The intuitive mind is a powerful force in the classroom and often an undetected one Intuitive conceptions knowledge or knowledge structures that individuals acquire and use largely without conscious reflection or explicit instruction sometimes work to facilitate learning in the classroom and other contexts But learning may also be impeded by intuitive conceptions and they can be difficult to dislodge as needed The literatures in psychology and education include a large and diverse body of theory and research on intuitive conceptions but this work is limited in some respects This volume contributes in four ways to overcome these limitations Understanding and Teaching the Intuitive Mind Student and Teacher Learning pulls together diverse theoretical and methodological approaches to the origin structure function and development of intuitive conceptions explores a diversity of academic disciplines paying equal attention not only to mathematics and science the fields in which intuitive concepts have been studied most extensively but also to the social sciences arts and humanities explicitly links theory and research to educational implications and classroom applications and focuses not only on students intuitive conceptions but also on teachers intuitive beliefs about learning and teaching Although the viewpoints of the contributors are diverse they share the belief that educational practices have much to gain by systematic studies of the intuitive learner and teacher This volume offers state of the art research based information and support for psychologists teacher educators educational administrators teachers prospective teachers and others who seek to develop educational practices that are cognizant of and responsive to the intuitive conceptions of students and teachers

*Encyclopaedia of Mathematics* Michiel Hazewinkel,2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this

ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

**Fundamentals of Mathematical Logic** Peter G. Hinman,2018-10-08 This introductory graduate text covers modern mathematical logic from propositional first order and infinitary logic and Gödel's Incompleteness Theorems to extensive introductions to set theory model theory and recursion computability theory Based on the author's more than 35 years of teaching experience the book develops students intuition by presenting complex ideas in the simplest context for which they make sense The book is appropriate for use as a classroom text for self study and as a reference on the state of modern logic

Hamm,1995 Surgical Intuition offers a guided tour to becoming an expert intuitive thinker It is intended not only for general surgeons but for family practitioners primary care internists and doctors of all specialties as

well as psychologists and cognitive scientists because it shows that the possibilities and complexities of expert intuition are relevant to all fields of endeavor Formalizing the Analysis of Algorithms Lyle Harold Ramshaw, 1979 Consider the average case analyses of particular deterministic algorithms Typical arguments in this area can be divided into two phases First by using knowledge about what it means to execute a program an analyst characterizes the probability distribution of the performance parameter of interest by means of some mathematical construct often a recurrence relation In the second phase the solution of this recurrence is studied by purely mathematical techniques The goal is to build a formal system in which the first phases of these arguments can be reduced to symbol manipulation Formal systems currently exist in which one can reason about the correctness of programs by manipulating predicates that describe the state of the executing process The construction and use of such systems belongs to the field of program verification **A Course in General Mathematics** Harold Thayer Davis, Cora Barbara Hannel, 1925 **AAAI-92**, 1992 AAI proceedings describe innovative concepts techniques perspectives and observations that present promising research directions in artificial intelligence The focus of the AAI 92 conference is on the re integration of AI as a diverse but coherent whole Accordingly the traditional list of community based content areas has been replaced by a more neutral set of taxonomies that span the field For example a paper proposing a new epistemology for representing the physical world based on an analysis of human brain structure would be described as representation physical world biological The papers collected here represent significant research contributions to such areas as the principles underlying cognition perception and action in man and machine the design application and evaluation of AI algorithms and systems and the analysis of domains in which AI systems perform
