**The forbid/allow asymmetry** Bregje Holleman, 2021-09-13 Questionnaires are widely used in the social sciences and very often survey data form the basis for governmental and commercial planning or evaluation Yet the quality of survey data is not attested to since a large variety of factors in the language use situation prove to influence the answers unintentionally The forbid allow asymmetry is a well known example of this when respondents are asked whether something should be forbidden about 50% may answer yes forbid whereas an equivalent question phrased with the verb to allow could well cause up to 75% of the respondents to answer no it should not be allowed Which question wording is preferable to measure respondents true attitudes Only when we know why the answers differ can we decide on that This book is the first to apply a systematic cognitive approach to describe the causes of the forbid allow asymmetry The question answering process is unravelled by a variety of experiments and meta analytic techniques Analyses reveal that the difference in question wording does not prompt respondents to retrieve different attitudes Instead the asymmetry reflects that the question wording causes the response options to be used differently Because of the qualifying dimensions in the question text the meanings of yes and no change as well as the cognitive distance between them This study sheds a different light on processes of question

answering and text interpretation Furthermore practical advice on questionnaire design and on the interpretation of survey data is given on the basis of these new insights The Practice of Medicinal Chemistry Camille Georges Wermuth, David Aldous, Pierre Raboisson, Didier Rognan, 2015-07-01 The Practice of Medicinal Chemistry Fourth Edition provides a practical and comprehensive overview of the daily issues facing pharmaceutical researchers and chemists In addition to its thorough treatment of basic medicinal chemistry principles this updated edition has been revised to provide new and expanded coverage of the latest technologies and approaches in drug discovery With topics like high content screening scoring docking binding free energy calculations polypharmacology QSAR chemical collections and databases and much more this book is the go to reference for all academic and pharmaceutical researchers who need a complete understanding of medicinal chemistry and its application to drug discovery and development Includes updated and expanded material on systems biology chemogenomics computer aided drug design and other important recent advances in the field Incorporates extensive color figures case studies and practical examples to help users gain a further understanding of key concepts Provides high quality content in a comprehensive manner including contributions from international chapter authors to illustrate the global nature of medicinal chemistry and drug development research An image bank is available for instructors at [www.textbooks.elsevier.com](http://www.textbooks.elsevier.com)
