**Pioneer Visual Neuroscience** James M. Brown, 2018-09-21 This book honors Naomi Weisstein's foreshortened span of work published from 1964 to 1992 Naomi Weisstein was a pioneer in the areas we now call visual neuroscience visual cognition and cognitive neuroscience Her enthusiastic pursuit of the mind was infectious inspiring many others to take up the challenge Despite her time as an active researcher being cut short Weisstein's impact was far reaching and long lasting and many of her ideas and insights foreshadowed today's active areas of inquiry into the inner workings of the mind Comprising contributions from leading scholars in the field *Pioneer Visual Neuroscience* outlines Weisstein's many contributions to the study of visual perception and processing and their effects on the field today This volume will be of interest to anyone interested in visual perception visual cognition and cognitive neuroscience

[The Neural Basis of Early Vision](#) A. Kaneko, 2013-03-13 Researchers in recent decades have elucidated signal transduction in the retina and the function of the visual cortex The highly flexible nature of neural circuits in the visual cortex especially during the critical period has been an interesting subject for studying neural plasticity and development Recent advances in the visual neurosciences of the vertebrate retina and the visual cortex were discussed during the 12th Keio International Symposium for Life Science and Medicine meeting jointly with Vision Forum 2002 Contributions to the symposium collected in this volume reflect the convergence of physiological cell biological molecular mathematical and clinical approaches The book covers topics ranging from phototransduction to visual information processing in the primary visual cortex and includes clinical studies on hereditary night blindness creating a valuable source of information for researchers and clinicians in the visual neurosciences

**The Roots of Visual Awareness** C.A. Heywood, A.D. Milner, C. Blakemore, 2003-10-31 The present volume was assembled in honor of Professor Alan Cowey FRS and attempts to embrace his wide range of research interests in visual neuroscience It is divided into four sections The first contains a group of papers dealing with different fundamental aspects of the visual system including the control and

monitoring of eye movements The second is concerned with the functional organization of cortical visual areas and their role in visual perception and visually guided action The third addresses issues concerning color and motion perception along with broader questions of visual attention and the effects of selective brain damage on these different aspects of visual experience The fourth and final section of the volume deals explicitly with questions relating to visual awareness with particular emphasis on blindsight a topic on which Alan Cowey has worked extensively in recent years both in humans and in monkeys

**The Visual Brain in Action** David Milner, Mel Goodale, 2006-10-12 First published in 1995 this book presents a model for understanding the visual processing underlying perception and action proposing a broad distinction within the brain between two kinds of vision conscious perception and unconscious online vision **Visual Neuroscience** J. D. Pettigrew, K. J. Sanderson, W. R. Levick, 1986-12-18 Visual neuroscience is the study of the way in which the brain accomplishes sight and this book presents overviews of a range of topics in this area The chapters are grouped into six sections retina retino geniculate connections visual development comparative visual physiology visual cortex and integrative aspects and the authors describe both their own contributions to the field and the influence of their teacher P O Bishop on their scientific development **Neuroscience** Dale Purves, 2008 Created primarily for medical and premedical students Neuroscience emphasizes the structure of the nervous system the correlation of structure and function and the structure function relationships particularly pertinent to the practice of medicine **Pioneer Visual Neuroscience** James M. Brown, 2019

Neuronal Operations in the Visual Cortex G.A. Orban, 2012-12-06 The invitation by the editors of the series studies of brain function to contribute a monograph on the visual cortex gives me the opportunity to present in a concentrated manner much of the work I have done on the visual cortical areas of cat and monkey However the field of visual cortical physiology is so active and so diverse that the presentation of only my own work would have given a very incomplete view of visual cortical functioning Therefore this monograph also reviews most of the studies carried out on the subject in the last two decades Where possible I have tried not only to describe the cortical machinery but also its possible functional purpose regarding vision In doing this I have expressed my personal views rather than just reviewing the experimental facts Much of the work presented in this monograph has been supported by the National Research Council of Belgium and the Research Council of the Catholic University of Leuven I express my gratitude to them I have enjoyed collaborating in these studies with P O Bishop H Kato H Kennedy K P Hoffmann H Maes J Duysens E Vandenbussche and H van der Glas I am much indebted to all those who have commented on earlier versions of this monograph J Allman H Barlow J BuBier M Callens J Duysens O J Griisser P Heggelund H Kennedy L C Orban and L Palmer Neurosciences, 1988 **CSA Neurosciences Abstracts**, 2000 **Visual Development** Nigel Daw, 2005-11-22 This is the second edition of a text devoted to the development of the visual system The author is one of the leaders in the field of visual neuroscience currently one of the hottest areas in neuroscience Visual Development 2e covers i development of the visual system ii effects of visual deprivation iii mechanisms

by which visual deprivation produces its effects and iv a list of some fundamental questions that need to be answered *The Journal of Neuroscience* ,2009

**Computational and Cognitive Neuroscience of Vision** Qi Zhao,2016-10-03 Despite a plethora of scientific literature devoted to vision research and the trend toward integrative research the borders between disciplines remain a practical difficulty To address this problem this book provides a systematic and comprehensive overview of vision from various perspectives ranging from neuroscience to cognition and from computational principles to engineering developments It is written by leading international researchers in the field with an emphasis on linking multiple disciplines and the impact such synergy can lead to in terms of both scientific breakthroughs and technology innovations It is aimed at active researchers and interested scientists and engineers in related fields
