The Wankel Rotary Engine John B. Hege,2015-08-13 Conceived in the 1930s simplified and successfully tested in the 1950s the darling of the automotive industry in the early 1970s then all but abandoned before resurging for a brilliant run as a high performance powerplant for Mazda the Wankel rotary engine has long been an object of fascination and more than a little mystery A remarkably simple design yet understood by few it boasts compact size light weight and nearly vibration free operation In the 1960s German engineer Felix Wankel s invention was beginning to look like a revolution in the making Though still in need of refinement it held much promise as a smooth and powerful engine that could fit in smaller spaces than piston engines of similar output Auto makers lined up for licensing rights to build their own Wankels and for a time analysts predicted that much of the industry would convert to rotary power This complete and well illustrated account traces the full history of the engine and its use in various cars motorcycles snowmobiles and other applications It clearly explains the working of the engine and the technical challenges it presented the difficulty of designing effective and durable seals early emissions troubles high fuel consumption and others The work done by several companies to overcome these problems is described in detail as are the economic and political troubles that nearly killed the rotary in the 1970s and the prospects for future rotary powered vehicles *Internal Combustion Engines and Powertrain Systems for Future Transport 2019* 0 IMECHE,2020-03-09 With the changing landscape of the transport sector there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion IC engine This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025 It continues to meet both requirements and challenges through continual technology advancement and innovation from the latest research With this in mind the contributions in *Internal Combustion Engines and Powertrain Systems for Future Transport 2019* not only cover the particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry The main topics include Engines for hybrid powertrains and electrification IC engines Fuel cells E machines Air path and other technologies achieving performance and fuel economy benefits Advances and improvements in combustion and ignition systems Emissions regulation and their control by engine and after treatment Developments in real world driving cycles Advanced boosting systems Connected powertrains AI Electrification opportunities Energy conversion and recovery systems Modified or novel engine cycles IC engines for heavy duty and off highway *Internal Combustion Engines and Powertrain Systems for Future Transport 2019* provides a forum for IC engine fuels and powertrain experts and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation off highway and stationary power industries *Engine*
