## Wild Dogs:

**The African Wild Dog** Scott Creel, Nancy Marusha Creel, 2019-12-31 With only 5 000 surviving the African wild dog *Lycaon pictus* is one of the world's most endangered large carnivores and one of the most remarkable. This comprehensive portrait of wild dogs incorporates previously scattered information with important new findings from a six year study in Tanzania's Selous Game Reserve Africa's largest protected area. The book emphasizes ecology concentrating on why wild dogs fare poorly in protected areas that maintain healthy populations of lions hyenas or other top carnivores. In addition to conservation issues it covers fascinating aspects of wild dog behavior and social evolution. The Creels use demographic behavioral endocrine and genetic approaches to examine how and why nonbreeding pack mates help breeding pairs raise their litters. They also present the largest data set ever collected on mammalian predator-prey interactions and the evolution of cooperative hunting allowing them to account for wild dogs' prowess as hunters. By using a large sample size and sophisticated analytical tools the authors step well beyond previous research. Their results include some surprises that will cause even specialists to rethink certain propositions such as the idea that wild dogs are unusually vulnerable to infectious disease. Several findings apply broadly to the management of other protected areas. Of clear appeal to ecologists studying predation and cooperation in any population this book collects and expands a cache of information useful to anyone studying conservation as well as to amateurs intrigued by the once maligned but extraordinary wild dog.

**The African Wild Dog** Scott Creel, Nancy Marusha Creel, 2002-06-09 This book is based on a six year study of African wild dogs *lycaon pictus* in Tanzania's Selous Game Reserve the largest protected area in Africa and one of the least studied.

The African Wild Dog Joshua Ross Ginsberg, David Whyte Macdonald, IUCN/SSC Candid Specialist Group, 1997 Over the last 30 years the African wild dog population has declined dramatically. Dogs have disappeared from 25 of the 39 countries where they were previously found and only 6 populations are believed to number more than 100. Today it is believed that only between 3 000 5 500 dogs remain in 600 1 000 packs with most to be found in eastern and southern Africa. The dramatic reduction in their population is attributed to a number of factors including human population growth and activities deterioration of habitat and contact with domestic dogs and their diseases. This Action Plan explores some of the reasons behind their disappearance and provides a number of proposed solutions split into 3 priority areas ranging from habitat management and conservation to monitoring domestic dogs.

**BOOK JACKET**     **In Search of the African Wild Dog** Roger De la Harpe, Pat De la Harpe, 2009 Arguable the most successful hunter in Africa the African wild dog ironically finds itself on the brink of extinction Part of the Canidae family and sharing a general similarity with the various canids worldwide the African wild dog differs fundamentally from other canids it belongs to the genus *Lycaon* which formed a new branch on the family tree some 3 million years back and subsequently evolved independently Today it is the only survivor of this unique line and because of its genetic difference is unable to interbreed with any of its canid relatives or even with the domestic dog Previously found in diverse habitats across the continent it has tragically disappeared from much of its former range Today there are only an estimated 3 000 to 5 500 wild dogs left in the whole of Africa a mere 500 of which occur in South Africa In spite of or perhaps because of the elusive nature of the wild dogs and their limited population numbers Roger and Pat have produced their best book yet     The Library of Natural History: Mammals. v.2. Sheldon, 2013-09-17 Wild Dogs The Natural History of the Nondomestic Canidae presents a comprehensive current natural history of the nondomestic dog species In this book a prodigious amount of previously uncollected information is presented in a straightforward form The organization of the book is alphabetical by genus and within each genus alphabetically by Linnean species name In some cases very little is known about a species In other cases the amount of available information is enormous and has been distilled to summary form The volume is intended as a straightforward assemblage of material It points the way toward but is not intended to provide a synthetic or theoretical big picture The book is intended as a general reference work Biologists wildlife managers mammalogists conservationists students and carnivore specialists will find here information assembled nowhere else Over 600 sources are included in the bibliography so the book also serves as an entry to the literature for those seeking more technical or specialized knowledge Naturalists and outdoorsmen will also enjoy discovering the particulars of familiar and unfamiliar canid species     **The Wolf** Jeremy Bradshaw, 1992 Describes the habitat social organization behavior and life
