A Practical Treatise on the Medical and Surgical Uses of Electricity George Miller Beard, Alphonso David Rockwell, 1881

Demand-Side Management and Electricity End-Use Efficiency A. de Almeida, Arthur H. Rosenfeld, 2012-12-06

A NATO Advanced Study Institute on Demand Side Management and Electricity End Use Efficiency was held in order to present and to discuss some of the most recent developments in demand side electric power management and planning methodologies as well as research progress in relevant end use technologies. Electricity is assuming an increasingly important role in buildings and industry due to its flexibility, efficiency of conversion and cleanliness at the point of use. However, the production and transmission of electricity requires huge investments and may have undesirable environmental impacts. The recent nuclear accident in Chernobyl and the damage caused by acid precipitation are creating increasing concerns about the impacts of power plants. Some environmental problems are local or regional, others such as global warming can affect the whole world. Although environmental impacts may be minimized with additional investments, electricity generation will become even more capital intensive. Energy and electricity in particular is not directly consumed by people. To achieve improved standards of living, what is important is the level of production of goods and services. If it is possible to produce the same quantity of goods and services with less electricity and in a cost-effective way, substantial benefits can be gained. By reducing costs, electricity efficiency can raise the standards of living and increase the competitiveness of an economy. Electricity efficiency also leads to reduced requirements in power plant operation, thus leading to reduced consumption of primary energy supplies and a higher quality environment. Electricity, 1899

Electricity Economics: Production Functions with Electricity Zhaoguang Hu, Zheng Hu, 2013-11-22

Electricity Economics: Production Functions with Electricity studies the production output from analyzing patterns of electricity consumption. Since electricity data can be used to measure scenarios of economic performance due to its accuracy and reliability, it could therefore also be used to help scholars explore new research frontiers that directly and indirectly benefit human society. Our research initially explores a similar pattern to substitute the Cobb-Douglas function with the production function with electricity to track and forecast economic activities. The book systematically introduces the theoretical frameworks and mathematical models of economics from the perspective of electricity consumption. The E-GDP functions are presented for case studies of more than 20 developed and developing countries. These functions also demonstrate substantial similarities between human DNA and production functions with electricity in terms of four major characteristics: namely, replication, mutation, uniqueness, and evolution. Furthermore, the book includes extensive data and case studies on the U.S., China, Japan, etc. It is intended for scientists, engineers, financial professionals, policy makers, consultants, and anyone else with a desire to study electricity economics as well as related applications. Dr. Zhaoguang Hu is the vice president and chief energy specialist at the State Grid Energy Research Institute, China. Zheng Hu is a PhD candidate at the Center for Energy and
