Cancer immunotherapy has been revolutionized by targeting specific immune subsets within the tumor microenvironment where T cells play a pivotal role. Gene engineered T cell strategies and immune checkpoint blockade ICB therapies have emerged as powerful approaches to reinvigorate tumor infiltrating T cells demonstrating considerable promise in clinical outcomes. However challenges persist particularly the limited in vivo persistence of adoptively transferred T cells and the variable patient response rates to ICB therapy. Key barriers include T cell exhaustion and the immunosuppressive milieu of the tumor microenvironment. Consequently a deep understanding of functional modulation of these immune subsets is urgently needed to enhance the efficacy and safety of various T cell therapies such as Tumor infiltrating T lymphocytes TIL T T cell receptor engineered T cells TCR T and Chimeric antigen receptor T cells CAR T. This Research Topic aims to explore and identify crucial targets and pathways for overcoming immune dysregulation in the tumor microenvironment. We seek to advance our understanding of these complexities by discussing innovative techniques that could augment T cell antitumor functionality. Contributions that unveil novel approaches or refine existing methods to boost the therapeutic potential of T cells in cancer treatment are particularly encouraged.

**AIDS/HIV Experimental Treatment Directory**, 1988      **G Families of Probability Distributions** Mir Masoom Ali, Irfan Ali, Haitham M. Yousof, Mohamed Ibrahim Mohamed Ahmed, 2023-03-31

Statistical distributions are essential tools to model the characteristics of datasets such as right or left skewness bi modality or multi modality observed in different applied sciences such as engineering medicine and finance. The well known distributions like normal Weibull gamma and Lindley are extensively used because of their simple forms and identifiability properties. In the last decade researchers have focused on the more complex and flexible distributions referred to as Generalized or simply G families of probability distributions to increase the modelling capability of these distributions by adding one or more shape parameters. The main aim of this edited book is to present new contributions by researchers in the field of G families of probability distributions. The book will help researchers to Develop new univariate continuous and discrete G families of probability distributions. Develop new bivariate continuous and discrete G families of probability distributions. Derive beneficial mathematical properties such as ordinary and incomplete moments moment generating functions residual life and reversed residual life functions order statistics quantile spread ordering and entropies and some bivariate and multivariate extensions of the new and existing models using a simple type copula.

**Molecular Mechanisms of Drug Resistance And Strategies of Sensitization in Breast**

**Cancer, 2nd edition** Yan Cheng, Jin-Ming Yang, Ceshi Chen, Yi Zhang, 2024-01-11 Basic scientific background Breast cancer is one of the most common cancer and the most frequent cause of cancer death among women worldwide Currently subtyping breast cancers into hormone receptor HR positive human epidermal growth factor receptor 2 overexpressing HER2 and triple negative breast cancer TNBC is the basis of diagnosing and treating this disease The main treatment strategies for breast cancer include surgery endocrine therapy molecular targeted therapy chemotherapy radiotherapy immunotherapy and gene therapy However resistance of breast cancer cells to chemotherapeutic agents molecular targeted therapies and immunotherapy may occur either intrinsically or de nova and is often ultimately responsible for treatment failure Therefore drug resistance poses a major challenge to breast cancer treatment Current developments Drug resistance in breast cancer is a complex clinical condition originating from a wide range of molecular alterations The development of endocrine therapy resistance is believed to be associated with many cellular changes such as ESR1 gene mutations bypassing estrogen signaling pathway and altered tamoxifen metabolism Meanwhile changes in immune response alternation of drug binding property and downstream pathways are involved in the mechanisms of drug resistance in HER2 breast cancer In addition resistance to chemotherapeutic agents predominantly arises from increased drug efflux and cross resistance Current studies suggest that treatment strategies and therapeutics have to be designed specifically to each patient in different clinical situations The use of modern genomic proteomic and functional analytical techniques has contributed to identify novel genes and signaling networks involved in breast cancer drug resistance Moreover the use of high throughput techniques in combination with bioinformatics and systems biology approaches has aided the interrogation of clinical samples and allowed the identification of molecular signatures and genotypes that predict responses to certain drugs Despite much progress has been made in the field of breast cancer drug resistance such as combination therapy and drug loaded nanoparticles the complexity and variability of drug resistance mechanism still inevitably lead to the continuous occurrence of drug resistance Therefore with the increasing amounts of anti breast cancer agents there are now unprecedented opportunities to understand and overcome drug resistance through further research into mechanisms and corresponding strategies which will help achieve lasting disease control and bring survival benefits to patients with advanced cancer Papers of interest The current Research Topic of Frontiers in Pharmacology focuses on publishing Original Research Review articles and Case Reports focusing on a elucidating mechanisms of drug resistance in breast cancer target mutations tumor microenvironment undiscovered genes and signaling pathways b promising drug delivery systems that can enhance the sensitivity of anti breast cancer agents to various tumors c strategies that can improve patient care during biochemotherapeutic treatments d small molecule compounds that are effective against drug resistant breast tumors e biomarkers of chemotherapy resistance in breast cancer patients and f in vitro and in vivo models Guidelines for article of submission Authors must stick to the set guidelines for ethical practices by the Frontiers journals The main content of the
