**Structured Development for Real-Time Systems, Volume 1: Introduction and Tools** Paul Ward T., Stephen Mellor J., Stephen J. Mellor, 1986      Structured Development for Real-Time Systems Paul T. Ward, 1986-06-04 Real time and embedded systems are in widespread use in the modern world From the microprocessor controller in a camera through smart traffic lights and production control systems to large defense systems computer technology is increasingly a part of systems that control and respond to their environments in real time As the technology has improved we have come to rely on these systems more and more we have even put our lives in their hands Airplanes biomedical accelerators nuclear power plants and the like all depend on real time control to operate safely A failure in a control system such as not responding correctly to faults in the environment could endanger many lives Unfortunately there is a tendency for developers to focus too heavily on the intricacies of the engineering and computer technology to the detriment of understanding the real world problem at hand At best this wastes time and resources and at worst it is dangerous in light of the life critical nature of today's systems This misplaced focus can result at least partly from the lack of a comprehensive set of modeling tools and techniques fitted to the real time development environment This book provides the tools and techniques needed for visualizing and verifying the operation of a real time system prior to construction and demonstrates their usefulness
