**Biological Test Method** Canada. Conservation and Protection, Canada. Environment Canada, Canada. Environmental Protection Directorate, 1992 This report describes methods recommended by Environment Canada for performing a sublethal marine toxicity test using gametes obtained from sea urchins or sand dollars In the test sperm are exposed to the substance being tested Eggs are then added and the success of fertilization under continued exposure to the same concentration of test substance is measured The endpoint is decreased success of fertilization described in terms of the concentration estimated to cause a specified percent inhibition or the lowest observed effect concentration and no observed effect concentration [Journal](#) Water Pollution Control Federation, 1987 [Environmental Toxicology and Chemistry](#), 2006

[New Microbiotests for Routine Toxicity Screening and Biomonitoring](#) Guido Persoone, Colin Janssen, Wim De Coen, 2012-12-06 The determination of the hazards resulting from the accidental or deliberate contamination of terrestrial and aquatic environments is in most countries still limited to the detection and quantification of the suspected pollutants by chemical analyses Such an approach is unfortunately hampered by the following constraints the costs as well as the technical difficulties of analyzing every individual chemical which may be present in the samples and the difficulty of assessing the hazards and risks of environmental contaminations from a set of chemical data During the last decades the scientific and

regulatory community has gradually realized that biological methodologies have to be taken into consideration for an ecologically meaningful assessment of the toxicological hazards of contaminants. Effect evaluations obtained with biological techniques indeed integrate the impact of all the contaminants to which living biota are exposed. Bioassays with selected test species representative for the biological communities of the environments under consideration are now applied more or less regularly to determine toxic and genotoxic effects. Taking into account the species specific and chemical specific character of toxicity to biota the necessity of a battery of tests approach with species of different trophic levels is currently also generally accepted and implemented. It is clear that a balanced partnership between chemical biological toxicological and microbiological analyses is always the best strategy for generating the broadest information base on environmental hazards.

*Biological Test Method*, 1993. Le présent document expose les méthodes recommandées par Environnement Canada pour l'exécution d'essais de toxicité sur la bactérie luminescente *Photobacterium phosphoreum*. Il présente les conditions et méthodes générales ou universelles permettant de réaliser des essais sur un large éventail de substances. On y précise aussi d'autres conditions et méthodes propres à l'évaluation d'échantillons de produits chimiques d'effluents de lixiviats d'eutriats de milieux récepteurs et de sédiments ou d'autres solides tels que des sols. Le lecteur y trouvera des instructions concernant la manipulation et le stockage des échantillons, les installations d'essai, la préparation des solutions d'essai et la mise en route des essais, les conditions prescrites pour les essais, les observations et mesures appropriées, les résultats des essais, les méthodes de calcul et l'utilisation de produits toxiques de référence. Le résultat de l'essai et la concentration de l'échantillon qu'on estime cause une inhibition de 50% de la production de lumière par la bactérie c'est-à-dire la CI50. L'estimation de cette valeur peut se faire après 5, 15 ou 30 minutes d'exposition. **Biological Test Method** Canada. Environment Canada, Canada.

Environmental Protection Directorate, 1992. Description of methods recommended by Environment Canada for performing toxicity tests with the luminescent bacterium *Photobacterium phosphoreum*. General conditions and procedures are outlined for testing a variety of substances. Additional conditions and procedures are stipulated that are specific for assessing samples of chemical effluent leachate, eutriate, receiving water and sediment or other solids such as soil. Included are instructions on sample handling and storage, test facility requirements, procedures for preparing test solutions and initiating tests, specified test conditions, appropriate observations and measurements, endpoints, methods of calculation and the use of reference toxicants.
