**Structural Dynamics** Roy R. Craig,1981 Analysis of Structures An Integration of Classical and Modern Methods Harry H West Presents a true integration of the classical and modern methods of structural analysis The classical formulations are used to develop fundamental concepts of analysis and many of these approaches are cast into matrix format to illustrate some of the characteristics of matrix methods After sufficient generalization modern matrix methods are then presented This dual approach enables students to understand and employ the modern computer methods of structural analysis as well as use the classical methods to solve small problems with confidence and check isolated portions of computer results 1980 Matrix Structural Analysis William McGuire and Richard H Gallagher A rigorous well organized book that examines computer oriented structural analysis with a strong emphasis on current applications The book features coverage of both framed structures trusses beams plane and space frames and continuous structures plates and shells The authors define the terminology coordinate systems and fundamental concepts and procedures of computerized structural analysis laying the foundation for more advanced
