Conlon,Michael L. Nicholson,Steven Schwab,2000 This book describes the current status of vascular access for patients with end stage renal failure who require dialysis The book highlights controversial areas and problems and describes differences in practice in USA and Europe Vascular Access is the Achilles heel of dialysis In the United States and Europe in 1999 there were in access of 400 000 patients maintained on dialysis The success of this life sustaining procedure is dependant on being able to successfully access the circulation and obtain blood flows of between two and five hundred mls per minute three times a week In 1964 Cimino and Brescia described what remains today the premier form of vascular access Not long after the development of the Cimino Brescia fistula it became apparent that there were patients in whom it was either impossible or extremely difficult to create an adequate fistula for dialysis As dialysis technology has been applied to older and sicker patients this trend has continued such that in the United States the majority of patients starting dialysis do not have a primary fistula The maintenance of long term vascular access in patients who do not have a primary fistula requires considerably increased effort In recent years a number of innovations have considerably increased the success of long term vascular access in these patients This book brings together these developments including strategies to prospectively detect impending vascular access failure and strategies to pre emptively prevent graft failure Simultaneously with these developments there have been dramatic improvements in our understanding of the pathophysiology of graft failure this improved understanding of the biology of access failure are beginning to bring to the clinical arena newer strategies to delay graft failure Vascular Access Simplified; second edition Alun H Davies,,Christopher P Gibbons,2007-05-01 Winner of a COMMENDED AWARD in the Urology category of the 2008 BMA Medical Book Competition Following on from the huge success of the first edition this is the second edition which will not only update all previous chapters but also it will have many additional chapters to add value over and above the first edition The need for dialysis access surgery is growing rapidly as the population of patients with endstage renal failure expands This book is aimed at those healthcare professionals involved in the care of patients undergoing dialysis Vascular Access Simplified gives a comprehensive review of all aspects of adult dialysis access with a specific emphasis on haemodialysis The text highlights some of the difference in practices of physicians in Europe and the USA The contributors are allied professionals physicians radiologists vascular and transplant

Vessel Health and Preservation: The Right Approach for Vascular Access Nancy L. Moureau, 2024-12-28 This second edition offers updated and revised information on vessel health and preservation VHP It presents a model of care and systematic application of vascular access and administration of intravenous treatment to show how establishing and maintaining a route to the bloodstream with optimal methods is essential for patients in acute care today This model concept was first published in poster form in 2008 and in JVA in 2012 which has received a great deal of attention especially in the US UK and Australia Until now little thought has been given to an intentional process to guide selection insertion and management of vascular access devices VADs and by default actions are based on crisis management when a quickly selected VAD fails The book details how VHP establishes a framework or pathway model for each step of the patient experience intentionally guiding improving and eliminating risk when possible The evidence points to the fact that reducing fragmentation establishing a pathway and teaching the process to all stakeholders reduces complications with intravenous therapy improves efficiency and diminishes cost As such this book has become a strong point of reference appealing to vascular access specialists bedside nurses physicians and other health professionals Few authoritative guides provide the depth and descriptive evidence included in this VHP model of care suitable for hospital administrators directors educators and others to apply within their services

Nurse APRN *Vascular Access Device Policy Standardization in a Hospital System* Jennifer Teerlink, 2022 Lack of
standardization in vascular access device management policies can increase nursing care variability increasing catheter
occlusion rates Catheter occlusions can delay treatments and may increase the risk of further complications for patients
increasing costs Purpose This quality improvement project aimed to standardize a hospital systems vascular access device
policy and nurse driven flushing and maintenance protocol Methodology A routine audit of an electronic policy system
identified over 50 vascular access device care and management policies in 11 hospitals These policies included outdated
procedural steps rather than directing nurses to one evidence based clinical practice guideline when performing clinical
skills One policy was developed following evidence based clinical practice guidelines and all hospitals were asked to retire
their existing policies to follow a standardized approach Results Each of the 11 hospitals adopted a standardized policy
Survey results of nurses indicated n 189 an educational gap in the awareness and use of one evidence based clinical practice
guideline when performing vascular access device care and maintenance which may have led to increased occlusions After
the policy intervention the doses of alteplase used for occluded catheters decreased Implications for Practice Standardizing
policy and directing nurses to one evidence based clinical practice guideline reduces nursing practice variability and
decreases catheter occlusion rates Nurse education is crucial to change practice and direct nurses to their correct resources
